Smallholders Manual:

Working with Smallholders International Finance Corporation, 2018-12-05 The world's population is expected to reach 9.8 billion in 2050. Meanwhile, concurrent rises in incomes and urbanization are driving increased consumption of meat, dairy and biofuels. Meeting the demand for food, feed and biofuel will require a global production increase of almost 50 percent relative to 2012. Production in South Asia and Sub-Saharan Africa, where 95 percent of farms are smaller than five hectares, must double at a minimum. A key element of policies to increase food production will be promoting improved food quality as the health costs of too much, too little and the wrong types of food become increasingly evident. Additional initiatives must address how to reduce food losses globally; one third of food production is lost or wasted at different stages in the food chain each year. Climate change is bringing further stressors. These challenges also present opportunities. Around the world, 450 million smallholder farmers are plagued by low productivity and poor access to inputs, technology, knowledge, financing and markets. Agribusinesses are increasingly working directly with smallholder farmers in low and middle income countries to help secure a sustainable supply of key agricultural commodities while boosting rural incomes and economic growth. Sourcing directly from smallholders can expand a firm's supply base, reduce margins paid to collectors and middlemen, facilitate improvements in quality and yield and deliver premium prices for a certified fair trade or sustainably produced product. Smallholders also represent a growing market for farm inputs, information and financial services. Agribusiness firms can help smallholders to increase productivity and improve crop quality, access knowledge, how to mitigate social and environmental impacts, develop farm management skills and combine their production with other farmers to achieve sufficient scale to be effective market players and meet the growing demand for safe, sustainable food by improving practices and introducing traceability and certification systems. *Working with Smallholders: A Handbook for Firms Building Sustainable Supply Chains* shows how agribusinesses can develop more sustainable, resilient and productive supply chains and illustrates the substantial impact of doing so on development. The book compiles innovative solutions and cutting edge ideas to meet the challenges and it incorporates a diverse collection of hands-on case studies from across the world that cover a variety of agribusiness sectors. This second edition builds on the lessons learned and provides updates in leading trends and technologies from those provided in the first edition published in 2014.

domains investments in driller training and associated investments in accelerating the drilling industry could catalyze a manual well drilling industry and significantly improve smallholder farmers affordable access to shallow groundwater

Sustainable Groundwater Development for Improved Livelihoods in Sub-Saharan Africa Paul Pavelic, Karen G.

Villholth, Shilp Verma, 2023-05-08 This book provides a comprehensive analysis of the benefits and challenges of intensifying groundwater irrigation in Sub Saharan Africa SSA for improving smallholder agrarian livelihoods Only about 3% of the groundwater resources of Sub Saharan Africa are used for irrigated agriculture despite the subcontinent s relative abundance of groundwater The majority of the region s smallholders are highly dependent on seasonal dryland cropping making them extremely vulnerable to uncertain weather patterns and droughts Improved irrigation capabilities through sustainable groundwater development could unleash smallholder farming and make it a major driver of economic growth poverty reduction climate resilience and improved food security So why is groundwater so underused Tapping into groundwater requires a major shift in farming practices and it has its own challenges and requirements smallholder access to land and finance for irrigation infrastructure and equipment gendered and equitable adoption options This whole list is framed in terms of what the smallholder farmers need Hence this should also be put in this context supply chains energy access resource availability and institutional support The chapters in this book present a picture that is not only heterogeneous across the region but also hold some common denominators They serve to enrich the discourse and help better understand the barriers along the pathways toward the sustainable and transformative adoption of groundwater irrigation The scientific information provided herein would be of interest to researchers practitioners decision makers and planners with interest in the region This book was originally published as a Special Issue of Water International journal

Water for wealth and food security: supporting farmer-driven investments in agricultural water management. Synthesis report of the AgWater Solutions Project Giordano, Meredith, de Fraiture, C., Weight, Elizabeth, van der Bliek, Julie (Eds.), 2012 With reference to developing countries

AD04E 2006 Small-scale chicken production, 2006 **Sustainable Water Management in Smallholder Farming** Sara Finley, 2016-07-27 Water is critical to all human activities but access to this crucial resource is increasingly limited by competition and the effects of climate change In agriculture water management is key to ensuring good and sustained crop yields maintaining soil health and safeguarding the long term viability of the land Water management is especially challenging on smallholder farms in resource poor areas which tend to be primarily rainfed and thus highly dependent on unreliable rainfall patterns Sustainable practices can help farmers promote the development of soils plants and field surfaces to allow maximum retention of water between rains and encourage the efficient use of each drop of water applied as irrigation Especially useful for farmers groups agricultural extension workers NGOs students and researchers working with farmers in dryland areas this comprehensive yet concise book is a practical and accessible resource for anyone interested in sustainable water management Sustainable intensification of smallholder farming systems in Sub-Saharan Africa and South Asia Benjamin Karikari, Francis Tetteh, Fred Kizito, Folorunso Mathew Akinseye, Christopher Mutungi, Bekele Hundie Kotu, Terry Ansah, 2024-04-17 Social Mobility in Europe Richard Breen, 2004-11-25 Social Mobility in Europe is the most comprehensive study to date of trends in intergenerational social mobility It uses data from 11 European countries covering the last 30 years of the twentieth century to analyze differences between countries and changes through time The findings call into question several long standing views about social mobility We find a growing similarity between countries in their class structures and rates of absolute mobility in other words the countries of Europe are now more alike in their flows between class origins and destinations than they were thirty years ago However differences between countries in social fluidity that is the relative chances between people of different class origins of being found in given class destinations show no reduction and so there is no evidence supporting theories of modernization which predict such convergence Our results also contradict the long standing Featherman Jones Hauser hypothesis of a basic similarity in social fluidity in all industrial societies with a market economy and a nuclear family system There are considerable differences between countries like Israel and Sweden where societal openness is very marked and Italy France and Germany where social fluidity rates are low Similarly there is a substantial difference between for example the Netherlands in the 1970s which was quite closed and in the 1990s when it ranks among the most open societies Mobility tables reflect many underlying processes and this makes it difficult to explain mobility and fluidity or to provide policy prescriptions Nevertheless those countries in which fluidity

increased over the last decades of the twentieth century had not only succeeded in reducing class inequalities in educational attainment but had also restricted the degree to which among people with the same level of education class background affected their chances of gaining access to better class destinations
