Ad Hoc and Sensor Networks Carlos de Morais Cordeiro, Dharma Prakash Agrawal, 2011. This book provides a comprehensive yet easy coverage of ad hoc and sensor networks and fills the gap of existing literature in this growing field. It emphasizes that there is a major interdependence among various layers of the network protocol stack. Contrary to wired or even one hop cellular networks, the lack of a fixed infrastructure, the inherent mobility of the wireless channel and the underlying routing mechanism by ad hoc and sensor networks introduce a number of technological challenges that are difficult to address within the boundaries of a single protocol layer. All existing textbooks on the subject often focus on a specific aspect of the technology and fail to provide critical insights on cross layer interdependencies. To fully understand these intriguing networks, one needs to grasp specific solutions individually and also the many interdependencies and cross layer interactions.
