**Nicotine, Caffeine and Social Drinking:**

**Behaviour and Brain Function** Monique Lorist,Jan Snel,2013-12-19 Often people use nicotine caffeine and some level of alcohol in varying combinations at different times of the day in order to optimize their functioning and feelings of well being whether at work in leisure time or in a social context However until now studies on the effects of this everyday practice have been diverse widespread and insufficiently summarized Recently developed methods to study the effects in more detail have received little attention especially among a nonscientific readership Nicotine Caffeine and Social Drinking focuses readers attention on the effects of normal socially accepted psychoactive substances on cognitive performance and on the brain Divided into three sections this book studies each substance individually before examining the effects of their combined usage

Laws of Human Behavior Donald Pfaff,Sandra Sherman,2025-03-04 How scientific studies of human behavior can be replicated with the consistency and rigor characteristic of the physical sciences yielding scientific laws In Laws of Human Behavior Donald Pfaff and Sandra Sherman argue that many behavioral and neural discoveries verified over the years through precise reliable measurement are tantamount to laws comparable in rigor and replicability to physical laws such as gravity and the second law of thermodynamics Drawing on research in areas including psychophysics various types of conditioning and habit formation and even social behaviors they show how important aspects of the behavioral sciences contribute to laws that should be celebrated now Responding to what some commentators have called a crisis in reliability the authors make a compelling case for the progress that experimental work in areas formerly labeled as soft science has achieved The book is international in scope References range from the early nineteenth century work of Weber to papers published in 2023 In particular the authors cite important accomplishments in the behavioral and neural sciences of the past few decades that support the characterization of these sciences as exact Each chapter of the book has three parts examples of the law s manifestations in everyday life examples of the laboratory science that supports the law and neurobiological results that further support the validity of the law The book also offers clues for understanding where the field of behavioral science is headed The authors intend for the book to be accessible to interested nonscientists

**Smoking** Bernard

Mausner,Ellen S. Platt,2013-10-22 Smoking A Behavioral Analysis is written by two experimental social psychologists It focuses on the psychological aspect of smoking and the effects that role playing has on it Comprised of two parts the first part deals with the reasons that people begin and continue smoking the environmental and intra individual support for smoking the relationship of these supports and the values and expectations concerning the effects of smoking The second part details an experiment that uses role playing to induce a change in smoking It includes the background design procedure and the implications of the experiment in the research and control of smoking The book is a valuable reference for psychologists medical doctors experts and lay people interested in smoking smoking cessation and the relationship of
