The Oxford Handbook of Adolescent Substance Abuse Robert A. Zucker, Sandra A. Brown, 2019-08-01

Adolescent substance abuse is the nation's 1 public health problem It originates out of a developmental era where experimentation with the world is increasingly taking place and where major changes in physical self and social relationships are taking place These changes cannot be understood by any one discipline nor can they be described by focusing only on the behavioral and social problems of this age period the characteristics of normal development or the pharmacology and addictive potential of specific drugs They require knowledge of the brain's systems of reward and control genetics psychopharmacology personality child development psychopathology family dynamics peer group relationships culture social policy and more Drawing on the expertise of the leading researchers in this field this Handbook provides the most comprehensive summarization of current knowledge about adolescent substance abuse The Handbook is organized into eight sections covering the literature on the developmental context of this life period the epidemiology of adolescent use and abuse similarities and differences in use addictive potential and consequences of use for different drugs etiology and course as characterized at different levels of mechanistic analysis ranging from the genetic and neural to the behavioural and social Two sections cover the clinical ramifications of abuse and prevention and intervention strategies to most effectively deal with these problems The Handbook's last section addresses the role of social policy in framing the problem in addressing it and explores its potential role in alleviating it

Howard, Robert A. Zucker, 1994 Organized in terms of an implicit phases model this special issue begins with two analyses of risk and protective factors that influence adolescent drinking patterns over time without the intrusion of deliberate intervention The remaining articles focus almost entirely on intervention research studies that test or evaluate intervention strategies in terms of their impact or potential impact on alcohol use and abuse by adolescents They are organized in terms of a micro macro environmental perspective moving from the smaller microcosm of the family through school settings communities and large governmental jurisdictions The papers in this issue lay the foundation for future avenues of inquiry and highlight some very important emergent research themes It is clear that family systems are attracting attention as potential environments for preventive interventions Historically families have been perceived as sources of alcohol problems and targets of treatment Now they are being viewed as possible protective systems and settings for deliberate intervention before alcohol related problems actually occur **Smoking, Drinking, and Illicit Drug Use Among American**
