These include the impact of computers and calculators in maths teaching the various arguments about the use of published schemes and for more investigational approaches to the curriculum and the way in which social and cultural factors can be approached through the teaching of various topics in mathematics. The final section looks at how teachers might continue their professional development through action research in their own classrooms The Effective Teaching of Mathematics Malcolm Simmons, 2014-09-11 First published in 1993 This series has been written for trainee teachers wishing to improve their teaching skills as well as for in service teachers especially those engaged in the supervision of trainees The book provides an overview of mathematics teaching at secondary level and links established mathematics content to recent curriculum developments in mathematics teaching in England and Wales and in Scotland The main purpose of the book is to instigate and complement good mathematics teaching practice in our classrooms Handbook on the History of Mathematics Education Alexander Karp, Gert Schubring, 2014-01-25 This is the first

comprehensive International Handbook on the History of Mathematics Education covering a wide spectrum of epochs and civilizations countries and cultures Until now much of the research into the rich and varied history of mathematics education has remained inaccessible to the vast majority of scholars not least because it has been written in the language and for readers of an individual country And yet a historical overview however brief has become an indispensable element of nearly every dissertation and scholarly article This handbook provides for the first time a comprehensive and systematic aid for researchers around the world in finding the information they need about historical developments in mathematics education not only in their own countries but globally as well Although written primarily for mathematics educators this handbook will also be of interest to researchers of the history of education in general as well as specialists in cultural and even social **Rethinking School Mathematics** Andrew Noyes, 2007-05-21 Why is it that so many pupils are put off by maths seeing it as uninspiring and irrelevant and that so many choose to drop it as soon as they can Why is it socially acceptable to be bad at maths Does the maths curriculum really prepare pupils for life This book presents some answers to these questions helping teachers to think through their own attitudes to teaching and learning and to work with pupils towards more effective and inspiring mathematical engagement Part I of the book explores the nature of school mathematics showing how the curriculum has been developed over the years and how increasing effort has been devoted to improving the quality of mathematics teaching with little apparent effect Part II focuses on ways of thinking about classroom mathematics which take account of social cultural political and historical aspects The chapters bring together a collection of activities resources and discussion which will help teachers develop new ways of teaching and learning maths This book will be essential reading for all maths teachers including maths specialists on initial teacher training courses **School Mathematics Project** School Mathematics Project, 1970 Teaching Secondary and Middle School Mathematics Daniel J.
