So Human A Brain Knowledge And Values In The Neurosciences:

So Human a Brain HARRINGTON,2012-12-06 WALTER A ROSENBLITH Footnotes to the Recent History of Neuroscience Personal Reflections and Microstories The workshop upon which this volume is based offered me an opportunity to renew contact fairly painlessly with workers in the brain sciences not just as a participant observer but maybe as what might be called a teller of microstories I had originally become curious about the brain by way of my wife s senior thesis in which she attempted to relate electroencephalography to certain aspects of human behavior As a then budding physicist and communications engineer I had barely heard about brain waves nor had I studied physiology in a systematic way My work on noise dealt with the effects of certain acoustical stimuli on biological structures and entire organisms This was the period immediately after World War II when many scientists and engineers who had done applied work in the war effort were trying to find their way among the challenging new fields that were opening up Francis Crick among others has described such a search taking place in the cafes of the other Cambridge the one on the Cam At that time the brain sciences in his opinion offered much less promise than molecular biology However he was sufficiently attracted by what they might eventually have to offer to keep an eye on them and several decades later his work turned toward the brain So Human a Brain Anne Harrington,1992 Congress has declared the 1990s to be the Decade of the Brain reflecting even high level government s acknowledgement of the pervasiveness of disorders and disabilities of the brain and the need for research treatment and rehabilitation This remarkable collection of essays from a Woods Hole conference date not stated encompasses many disciplines tackling philosophical issues connected with brain research animal awareness and human sensibility the therapeutic experience gender and the brain ethnographic and sociohistorical perspectives in the brain sciences and language neuropsychology and moral tradition among other topics Annotation copyrighted by Book News Inc Portland OR

Affective Neuroscience Jaak Panksepp,2004-09-30 This comprehensive text on the fundamental brain sources of human and animal feelings summarizes up to date information about the subcortical operating systems that organize the fundamental emotional tendencies of all mammals Complex material is presented in a comprehensive but readable manner The book approaches emotions from the perspective of basic emotion theory but does not fail to address the more complex issues raised by constructionist approaches including relations to human consciousness Representing a synthetic integration of vast amounts of neurobehavioral knowledge this book may be the most important contribution to understanding the biology of emotions since Darwin s Expression of Emotions in Man and Animals Throughout the psychiatric implications of this type of knowledge are also addressed Neuroscience for Leaders Nikolaos Dimitriadis,Alexandros Psychogios,2020-10-03 Unlock your potential with the latest neuroscientific insights and succeed as a leader in complex business environments As understanding of neuroscience increases it is better understood how scientific insights can be applied to develop and enhance leadership Neuroscience for Leaders captures the most up to date and important findings in

neuroscience and links these to the business world This guide offers a simple framework to put these principles into practice to make better decisions take the right actions and find faster solutions Now in its second edition this book presents a comprehensive approach to leading people and organizations based on academic research The authors Brain Adaptive Leadership approach offers a step by step guide to enhancing the way leaders think understanding and nurturing emotions shaping automated brain responses and developing dynamic relationships Examples activities and practical suggestions are all designed to be clear and engaging Neuroscience for Leaders is the essential guide for leaders who are ready to gain the business advantage scientifically

Finding Consciousness in the Brain Peter G. Grossenbacher, 2001-01-01 How does the brain go about the business of being conscious Though we cannot yet provide a complete answer this book explains what is now known about the neural basis of human consciousness The last decade has witnessed the dawn of an exciting new era of cognitive neuroscience For example combination of new imaging technologies and experimental study of attention has linked brain activity to specific psychological functions The authors are leaders in psychology and neuroscience who have conducted original research on consciousness They wish to communicate the highlights of this research to both specialists and interested others and hope that this volume will be read by students concerned with the neuroscientific underpinnings of subjective experience As a whole the book progresses from an overview of conscious awareness through careful explanation of identified neurocognitive systems and extends to theories which tackle global aspects of consciousness Series B

The Idea of the Brain Matthew Cobb, 2020-03-12 Shortlisted for the 2020 Baillie Gifford Prize A New Statesman Book of the Year This is the story of our quest to understand the most mysterious object in the universe the human brain Today we tend to picture it as a computer Earlier scientists thought about it in their own technological terms as a telephone switchboard or a clock or all manner of fantastic mechanical or hydraulic devices Could the right metaphor unlock the its deepest secrets once and for all Galloping through centuries of wild speculation and ingenious sometimes macabre anatomical investigations scientist and historian Matthew Cobb reveals how we came to our present state of knowledge Our latest theories allow us to create artificial memories in the brain of a mouse and to build AI programmes capable of extraordinary cognitive feats A complete understanding seems within our grasp But to make that final breakthrough we may need a radical new approach At every step of our quest Cobb shows that it was new ideas that brought illumination Where he asks might the next one come from What will it be

The New Brain Sciences Dai Rees, Steven Rose, 2004-10-21 The last 20 years have seen an explosion of research and development in the neurosciences Indeed some have called this first decade of the 21st century the decade of the mind An all encompassing term the neurosciences cover such fields as biology psychology neurology psychiatry and philosophy and include anatomy physiology molecular biology genetics and behaviour It is now a major industry with billions of dollars of funding invested from both public and private sectors Huge progress has been made in our understanding of the brain and its functions However with progress comes controversy responsibility and dilemma The New

The Evolution of Language Out of Pre-language Talmy Givón, Bertram F. Malle, 2002-01-01 The contributors to this volume are linguists psychologists neuroscientists primatologists and anthropologists who share the assumption that language just as mind and brain are products of biological evolution The rise of human language is not viewed as a serendipitous mutation that gave birth to a unique linguistic organ but as a gradual adaptive extension of pre existing mental capacities and brain structures The contributors carefully study brain mechanisms diachronic change language acquisition and the parallels between cognitive and linguistic structures to weave a web of hypotheses and suggestive empirical findings on the origins of language and the connections of language to other human capacities The chapters discuss brain pathways that support linguistic processing origins of specific linguistic features in temporal and hierarchical structures of the mind the possible co evolution of language and the reasoning about mental states and the aspects of language learning that may serve as models of evolutionary change

Diagrammatic Representation and Inference Gem Stapleton, John Howse, John Lee, 2008-09-22 Diagrams is an international and interdisciplinary conference series covering all aspects of research on the theory and application of diagrams Recent technological advances have enabled the large scale adoption of diagrams in a diverse range of areas Increasingly sophisticated visual representations are emerging and to enable effective communication insight is required into how diagrams are used and when they are appropriate for use The pervasive everyday use of diagrams for communicating information and ideas serves to illustrate the importance of providing a sound understanding of the role that diagrams can and do play Research in the field of diagrams aims to improve our understanding of the role of diagrams sketches and other visualizations in communication computation cognition creative thought and problem solving These concerns have triggered a surge of interest in the study of diagrams The study of diagrammatic communication as a whole must be pursued as an interdisciplinary endeavour Diagrams 2008 was the fifth event in this conference series which was launched in Edinburgh during September 2000 Diagrams attracts a large number of researchers from virtually all related fields placing the conference as a major international event in the area Diagrams is the only conference that provides a united forum for all areas that are concerned with the study of diagrams for example architecture artificial intelligence cartography cognitive science computer science education graphic design history of science human computer interaction linguistics logic mathematics philosophy psychology and software modelling We see issues from all of these fields discussed in the papers collected in the present volume

Mind from Body Don M. Tucker, 2007-06-25 The neural structures of the brain exist to construct information They do this by creating concepts that relate internal personal need to external environmental reality Meaning is formed in the brain by neural network patterns that traverse these two structures of experience the visceral nervous system representing personal need and the somatic nervous system interfacing with external reality The scientific question is how exactly the brain gets from constructing information to creating meaning The philosophical question is what this process can tell us about the nature of experience In the proposed book Don Tucker addresses both of these questions and in doing so makes an important contribution to both neuroscience and philosophy

Lamarckism and the Emergence of 'Scientific' Social Sciences in Nineteenth-Century Britain and France Snait B. Gissis, 2024-04-09 The book presents an original synthesizing framework on the relations between the biological and the social Within these relations the late nineteenth century emergence of social sciences aspiring to be constituted as autonomous as scientific disciplines is described analyzed and explained Through this framework the author points to conceptual and constructive commonalities conjoining significant founding figures Lamarck Spencer Hughlings Jackson Ribot Durkheim Freud who were not grouped nor analyzed in this manner before Thus the book offers a rather unique synthesis of the interactions of the social the mental and the evolutionary biological Spencerian Lamarckism and or Neo Lamarckism crystallizing into novel fields It adds substantially to the understanding of the complexities of evolutionary debates during the last quarter of the nineteenth century It will attract the attention of a wide spectrum of specialists academics and postgraduates in European history of the nineteenth century history and philosophy of science and history of biology and of the social sciences including psychology

Sexing the Body Anne Fausto-Sterling, 2020-06-30 Now updated with groundbreaking research this award winning classic examines the construction of sexual identity in biology society and history Why do some people prefer heterosexual love while others fancy the same sex Is sexual identity biologically determined or a product of convention In this brilliant and provocative book the acclaimed author of *Myths of Gender* argues that even the most fundamental knowledge about sex is shaped by the culture in which scientific knowledge is produced Drawing on astonishing real life cases and a probing analysis of centuries of scientific research Fausto Sterling demonstrates how scientists have historically politicized the body In lively and impassioned prose she breaks down three key dualisms sex gender nature nurture and real constructed and asserts that individuals born as mixtures of male and female exist as one of five natural human variants and as such should not be forced to compromise their differences to fit a flawed societal
