Strategies of Problem Solving Maria Nogin, 2014-06-24 Solving mathematical problems is both a science and an art It is a science because we need to learn some basic concepts and skills and use proper terminology when explaining our solution to other people It is also an art because very often we need to be creative There are infinitely many types of math problems and it is impossible to learn how to solve every problem in the world However there are a few basic principles that are good to know There are a few approaches and methods that are often useful In this book we discuss the major ones including various types of proofs the pigeon hole principle the principle of mathematical induction invariants coloring etc In each chapter we provide basic definitions and facts to get you started We do not prove most of the well known facts given in this book since our main goal is to learn how to solve problems i.e. use these facts They are usually proved in other college courses such as abstract algebra number theory and analysis Sometimes however the idea of a proof of a theorem can be used for solving many problems In such cases we provide the proof The book contains over 300 problems on various topics and detailed

solutions of approximately half of them This book is primarily intended for high school and college students and mathematics teachers Most chapters are accessible to middle school students as well It would especially be helpful for those competing in mathematics contests and wishing to improve their problem solving skills The first edition contained some minor errors which have been fixed in the second edition More problems were also added **Problem-solving Through Problems**
