Analysis and Applications H. P. Dikshit,Pawan K. Jain,2003-01-29 Analysis and its applications have been major areas for research in mathematics and allied fields The fast growing power of computation has made a significant and useful impact in these areas This has lead to computational analysis and the emergence of fields like Bezier Bernstein methods for computer aided geometric design constructive approximation and wavelets and even computational harmonic analysis Analysis and Applications consists of research articles including a few survey articles by eminent mathematicians projecting trends in constructive and computational approximation summability theory optimal control and theory and applications of function spaces and wavelets **Sensitivity & Uncertainty Analysis, Volume 1** Dan G. Cacuci,2003-05-28 As computer assisted modeling and analysis of physical processes have continued to grow and diversify sensitivity and uncertainty analyses have become indispensable investigative scientific tools in their own right While most techniques used for these analyses are well documented there has yet to appear a systematic treatment of the method based on adjoint operators which is applicable to a much wider variety of problems than methods traditionally used in control theory This book fills that gap focusing on the mathematical underpinnings of the Adjoint Sensitivity Analysis Procedure ASAP and the use of deterministically obtained sensitivities for subsequent uncertainty analysis *Topology Optimization Theory for Laminar Flow* Yongbo Deng,Yihui

Wu,Zhenyu Liu,2017-09-27 This book presents the topology optimization theory for laminar flows with low and moderate Reynolds numbers based on the density method and level set method respectively The density method based theory offers efficient convergence while the level set method based theory can provide an accurate mathematical expression of the structural boundary Unsteady body force driven and two phase properties are basic characteristics of the laminar flows The

book discusses these properties which are typical of microfluidics and one of the research hotspots in the area of Micro Electro Mechanical Systems MEMS providing an efficient inverse design approach for microfluidic structures To demonstrate the applications of this topology optimization theory in the context of microfluidics it also investigates inverse design for the micromixer microvalve and micropump which are key elements in lab on chip devices

Regularization of Ill-Posed Problems by Iteration Methods S.F. Gilyazov, N.L. Gol'dman, 2013-04-17 Iteration regularization i.e. utilization of iteration methods of any form for the stable approximate solution of ill posed problems is one of the most important but still insufficiently developed topics of the new theory of ill posed problems In this monograph a general approach to the justification of iteration regularization algorithms is developed which allows us to consider linear and nonlinear methods from unified positions Regularization algorithms are the classical iterative methods steepest descent methods conjugate direction methods gradient projection methods etc complemented by the stopping rule depending on level of errors in input data They are investigated for solving linear and nonlinear operator equations in Hilbert spaces Great attention is given to the choice of iteration index as the regularization parameter and to estimates of errors of approximate solutions Stabilizing properties such as smoothness and shape constraints imposed on the solution are used On the basis of these investigations we propose and establish efficient regularization algorithms for stable numerical solution of a wide class of ill posed problems In particular descriptive regularization algorithms utilizing a priori information about the qualitative behavior of the sought solution and ensuring a substantial saving in computational costs are considered for model and applied problems in nonlinear thermophysics The results of calculations for important applications in various technical fields a continuous casting the treatment of materials and perfection of heat protective systems using laser and composite technologies are given

Nonlinear Functional Analysis and Its Applications, Part 2 Felix E. Browder, 1986 Handbook of Mathematical Fluid Dynamics S. Friedlander, D. Serre, 2007-05-16 This is the fourth volume in a series of survey articles covering many aspects of mathematical fluid dynamics a vital source of open mathematical problems and exciting physics *Control of Distributed Parameter Systems 1989* M. Amouroux, A. El Jai, 2014-06-28 This volume presents state of the art reports on the theory and current and future applications of control of distributed parameter systems The papers cover the progress not only in traditional methodology and pure research in control theory but also the rapid growth of its importance for different applications This title will be of interest to researchers working in the areas of mathematics automatic control computer science and engineering *Multiscale Problems in Science and Technology* Nenad Antonic, Nenad Antonić, 2002-06-26 Proceedings of the Conference on Multiscale Problems in Science and Technology Dubrovnik Croatia 3-9 September 2000

Mathematical Essays Chuan-Chih Hsiung, 1983 This is a collection of research papers published in various mathematical journals by friends colleagues and former students of Professor Buchin Su in honor of his 80th birthday and 50th year of educational work Professor Su was born in 1902 in Pingyang County Zhejiang Province People's Republic of China He

received the degree of Bachelor of Science in mathematics from Tohoku University Sendai Japan in 1927 and the degree of Doctor of Science from the same university in 1931 After returning to China in 1931 he first taught at Zhejiang University in Hangzhou until 1952 when the whole College of Science of Zhejiang University was merged into Fudan University in Shanghai During his 50 years of educational work besides teaching he also has taken up various administrative positions serving as Chairman Dean Vice President and finally the President of Fudan University in 1978

Boundary Value Problems with Equivalued Surface and Resistivity Well-Logging T Li, Songmu Zheng, Yong-Si Tan, Weixi Shen, 1998-03-25 This first part of this book deals with the boundary value problem with equivalued surfaces while the second part is concerned with the mathematical model and method including the numerical method of the resistivity well logging for the three lateral well logging

Homogenization Algebras and Applications Gabriel Nguetseng, 2025-05-26 The book presents a deterministic homogenization theory intended for the mathematical analysis of non stochastic multiscale problems both within and beyond the periodic setting The main tools are the so called homogenization algebras the classical Gelfand representation theory and a class of actions by the multiplicative group of positive real numbers on numerical spaces The basic approach is the Sigma convergence method which generalizes the well known two scale convergence procedure Numerous problems are worked out to illustrate the theory and highlight its broad applicability The book is primarily intended for researchers including PhD students and lecturers interested in periodic as well as non periodic homogenization theory

Domain Decomposition Methods in Science and Engineering XX Randolph Bank, Michael Holst, Olof Widlund, Jinchao Xu, 2013-07-03 These are the proceedings of the 20th international conference on domain decomposition methods in science and engineering Domain decomposition methods are iterative methods for solving the often very large linear or nonlinear systems of algebraic equations that arise when various problems in continuum mechanics are discretized using finite elements They are designed for massively parallel computers and take the memory hierarchy of such systems in mind This is essential for approaching peak floating point performance There is an increasingly well developed theory which is having a direct impact on the development and improvements of these algorithms

Some Methode [i.e. Methods] in the Mathematical Analysis of Systems and Their Control Jacques-Louis Lions, 1981

Optimization and Control for Partial Differential Equations Roland Herzog, Matthias Heinkenschloss, Dante Kalise, Georg Stadler, Emmanuel Trélat, 2022-03-07 This book highlights new developments in the wide and growing field of partial differential equations PDE constrained optimization Optimization problems where the dynamics evolve according to a system of PDEs arise in science engineering and economic applications and they can take the form of inverse problems optimal control problems or optimal design problems This book covers new theoretical computational as well as implementation aspects for PDE constrained optimization problems under uncertainty in shape optimization and in feedback control and it illustrates the new developments on representative problems from a variety of applications

Optimization and Related Fields Roberto Conti, Ennio de Giorgi, Franco Giannessi, 2006-11-14
