## Some Theoretical Problems Of Catalysis:

Some Theoretical Problems of Catalysis Takao Kwan, Georgii K. Boreskov, Georgij Konstantinovič Boreskov, Kenji Tamaru, Tōkyō Daigaku Shuppan-kai, 1973      *Some Theoretical Problems of Catalysis: Research Reports of the 1st Soviet-Japanese Seminar on Catalysis* T. Kwan, 1973      *The Some Common Problems Of High Energy Physics, Gravitation And Cosmology* Leo G. Sapogin, V. A. Dzhanibekov, Yu. A. Ryabov, This article describes a model of Unitary Quantum Field theory where the particle is represented as a wave packet The frequency dispersion equation is chosen so that the packet periodically appears and disappears without form changings      Metal-Catalyzed Oxidations of Organic Compounds Roger Sheldon, 2012-12-02 Metal Catalyzed Oxidations of Organic Compounds Mechanistic Principles and Synthetic focuses on the oxidative transformations of functional groups This book explores oxidation as being extensively used in the laboratory synthesis of fine organic chemicals and in the manufacture of large volume petrochemicals Organized into two parts encompassing 13 chapters this book starts with an overview of the mechanistic principles of oxidation reduction in biochemical organic and inorganic systems This text then proceeds with a discussion of the use of molecular oxygen hydrogen peroxide and alkyl hydroperoxides as primary oxidants Other chapters explore stoichiometric oxidations with metal oxidants which include permanganate and chromic acid This book discusses as well the synthetic applications of catalytic oxidations as well as the technology of petrochemical oxidation The final chapter deals with the autoxidations of sulfur phosphorus and nitrogen compounds This book is intended for chemists involved in organic synthesis catalysis and organometallic chemistry both in academic institutions and in industrial laboratories      **Some Problems in Chemical Kinetics and Reactivity, Volume 1** Nikolai Nikolaevich Semenov, 2017-03-14 This translation in two volumes of an introductory paper to a Symposium on Chemical Kinetics and Reactivity held in Moscow in 1954 has been enlarged and revised by the author winner of the Nobel Prize in chemistry in 1956 and one of the two or three top flight Russian physical scientists Volume 1 covers a wide range of important work and includes a survey of radical and chain reactions and a discussion of chemical changes direct mono and bi molecular processes ionic reactions heterogeneous catalysis initiation and destruction of radical chains on solid surfaces Originally published in 1958 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905      **Proceedings of the 16th FEBS Congress** Federation of European Biochemical Societies. Meeting, 1985 The scientific programme of the 16th FEBS meeting held in Moscow 1984 was very wide and covered practically all major aspects of the study of living matter on a molecular level The scientific level of all symposia organized within the framework of the meeting was extremely

high and reflected the latest achievements in each particular branch of science This three part publication of the Proceedings of the 16th FEBS Congress includes the lectures that are of particular interest The volumes are available separately or at a specially discounted set price

**The Physical Basis for Heterogeneous Catalysis** Edmund Drauglis, 2013-11-21 THE PHYSICAL BASIS FOR HETEROGENEOUS CATALYSIS is the proceedings of the ninth Battelle Colloquium in the Materials Sciences held in Gstaad Switzerland September 2-6 1974 It took as its theme the application of modern theoretical and experimental surface physics to heterogeneous catalysis Progress in the field by classical chemical methods seemed to have slowed down at a time when the need for better catalysts was particularly great The Organizing Committee thought it might be possible to accelerate progress by the application of the powerful techniques evolved in recent years for studying atomically clean surfaces However the translation of ideas derived from clean single crystal surfaces with well characterized chemisorbed layers to real catalysts with high ratios of surface to mass on which reactions were taking place and requiring transport of mass and energy is a giant step raising many questions and requiring thorough discussion by surface physicists on the one hand and catalytic chemists on the other The 1974 Battelle Colloquium provided a forum for this exchange As its usual custom the Colloquium started the first day of introductory lectures by three distinguished scientists who have contributed importantly over many years to this field

**The Oxide Handbook** G. V. Samsonov, 2013-03-08 The continuous and ever expanding development of high temperature technology involves the use of high temperature refractory materials and one of the most important classes of these is the oxides i.e. compounds of elements with oxygen Oxides are the oldest refractory compounds known in technology and this is connected with their high chemical stability and abundance in nature In addition to the use of oxides as raw materials for metallurgical processes the refractoriness chemical stability and magnetic and other technically important properties of oxides have been put to use since antiquity At the present time the importance of oxides as bases of many materials for new technology is substantial and is growing rapidly with the development of processes for the direct conversion of various forms of energy into electrical energy the development of nuclear technology electronics semiconductor and dielectric technology and cosmic technology where the refractoriness and chemical stability of oxides are used in combination with their specific physical properties Oxides are the foundation of the so called oxygen containing or oxygen refractory materials which are fundamental to high temperature technology Oxides are no less important as the bases of practically all structural materials and rocks A number of oxides are involved in biological processes

Berton, 2007 Chemical engineering deals with the application of physical science in particular chemistry and physics and mathematics to the process of converting raw materials or chemicals into more useful or valuable forms As well as producing useful materials chemical engineering is also concerned with pioneering valuable new materials and techniques

an important form of research and development with direct applications in pharmaceuticals semiconductors artificial kidneys oil refineries solar panels clean water and biocompatible polymers This book presents important research in this explosive field
