

The background of the entire image is a dark charcoal grey. It is covered with numerous thick, expressive, red scribbles and loops, resembling chalk or paint strokes. These marks are scattered across the frame, with some forming larger, more complex shapes. In the center of the image, there is a white, equilateral triangle pointing downwards. The text is overlaid on this background.

## **The Hidden Factor:**

The Hidden Factor Steven Skaggs, 2023-11-21 An exquisitely illustrated introduction to the gestural mark in the designed world exploring the tension between marks which are felt and images and words which are conceptual In The Hidden Factor Steven Skaggs provides a beautifully illustrated and explained introduction to the mark from those as physical as a scratch made by an animal to those as accidental as a splatter of paint to those as intentional as hand drawn characters Skaggs makes the case that in the visual arts gestures and mark making operate on an equal level with image and word While we might think of content as that which is communicated through text and images Skaggs shows through visual examples that the gestural mark is often hidden within both images and the typographic forms that convey words By mapping different kinds of marks and showing how marks combine with image and word The Hidden Factor explains that our desire for conceptual information suppresses our awareness of marking This is especially the case with the tension between word and mark where we desire legibility As a result one of the most conservative of arts calligraphy has the potential of being the most radical since gesturally expressive handwriting is a natural threat to the legibility of a text Filled with expressive calligraphic art graffiti and other gorgeous marks The Hidden Factor is an eye opening read that brings to the fore the importance and indeed the prevalence of the mark in everything we see

**Empirical Asset Pricing Models** Jau-Lian Jeng, 2018-03-19 This book analyzes the verification of empirical asset pricing models when returns of securities are projected onto a set of presumed or observed factors. Particular emphasis is placed on the verification of essential factors and features for asset returns through model search approaches in which non diversifiability and statistical inferences are considered. The discussion reemphasizes the necessity of maintaining a dichotomy between the nondiversifiable pricing kernels and the individual components of stock returns when empirical asset pricing models are of interest. In particular, the model search approach with this dichotomy emphasized for empirical model selection of asset pricing is applied to discover the pricing kernels of asset returns.

Mechanism Exploration of Multi-indicator Synthetical Assessment Method DONG QIU, 2025-07-28 The multi indicator synthetical assessment method composite indicator is one of the two basic methods used by economic statistics to solve the additivity issue, the other being the value indicator, especially when facing the trend of measured welfare turn. Its importance is highlighted and it is an indicator tool that cannot be underestimated in the empirical analysis process. In the development process of composite indicators, it is particularly important to pay attention to the entanglement and clarification of reason and mathematics. We should not only prefer the technical approach and focus on improving the mathematical difficulty of the method, but also pay attention to the mechanism approach of the method. We should also pay attention to the consistency of different composite methods in methodology that is to improve, expand, deepen and promote the methodology of composite indicators from a systematic visual field.
