interaction coupling and sensing actuating and control techniques arise in the development of intelligent structures. Due to the multi-disciplinary nature of these problems, all of the classical sciences and technologies such as applied mathematics, material science, solid and fluid mechanics, control techniques, and others must be assembled and used to solve them. IUTAM well understands the importance of this emerging technology. Ibrahim, 2017-04-17. This important self-contained reference deals with structural life assessment (SLA) and structural health monitoring (SHM) in a combined form. SLA periodically evaluates the state and condition of a structural system and provides recommendations for possible maintenance actions or the end of structural service life. It is a diversified field and relies on the theories of fracture mechanics, fatigue damage process, and reliability theory. For common structures, their life assessment is not only governed by the theory of fracture mechanics and fatigue damage process but by other factors such as corrosion, grounding, and sudden collision. On the other hand, SHM deals with the detection, prediction, and location of crack development online. Both SLA and SHM are combined in a unified and coherent treatment. Dynamics of Smart Structures

Ranjan Vepa, 2010-03-10. Dynamics of Smart Structures is a practical, concise, and integrated text that provides an introduction to the fundamental principles of a field that has evolved over the recent years into an independent and identifiable subject area. Bringing together the concepts, techniques, and systems associated with the dynamics and control of smart structures, it comprehensively reviews the differing smart materials that are employed in the development of the smart structures and covers several recent developments in the field of structural dynamics. Dynamics of Smart Structures has been developed to complement the author's new interdisciplinary programme of study at Queen Mary University of London that includes courses on emerging and new technologies such as biomimetic robotics, smart composite structures, micro-electro-mechanical systems (MEMS), and their applications, and prosthetic control systems. It includes chapters on smart materials and structures, transducers for smart structures, fundamentals of structural control, dynamics of continuous structures, dynamics of plates and plate-like structures, dynamics of piezoelectric media, mechanics of electro-actuated composite structures, dynamics of thermo-elastic media, shape memory alloys, and controller designs for flexible structures. *Shape Memory Polymers for Aerospace Applications* Gyaneshwar Tandon, Jeffery Baur, Amber McClung, 2015-11-20.
