Guide to Reliable Internet Services and Applications

Charles R. Kalmanek, Sudip Misra, Yang (Richard) Yang, 2010-06-09 An oft repeated adage among telecommunication providers goes There are three things that matter reliability reliability time to market and cost If you can't do all three at least do the first three Yet designing and operating reliable networks and services is a Herculean task Building truly reliable components is unacceptably expensive forcing us to construct reliable systems out of unreliable components The resulting systems are inherently complex consisting of many different kinds of components running a variety of different protocols that interact in subtle ways Inter networks such as the Internet span multiple regions of administrative control from campus and corporate networks to Internet Service Providers making good end to end performance a shared responsibility borne by sometimes uncooperative parties Moreover these networks consist not only of routers but also lower layer devices such as optical switches and higher layer components such as firewalls and proxies And these components are highly configurable leaving ample room for operator error and buggy software As if that were not difficult enough end users understandably care about the performance of their higher level applications which has a complicated relationship with the behavior of the underlying network Despite these challenges researchers and practitioners alike have made tremendous strides in improving the reliability of modern networks and services

Advances in Knowledge Discovery and Data Mining

Ming-Syan Cheng, Philip S. Yu, Bing Liu, 2003-08-01 Knowledge discovery and data mining have become areas of growing significance because of the recent increasing demand for KDD techniques including those used in machine learning databases statistics knowledge acquisition data visualization and high performance computing In view of this and following the success of the five previous PAKDD conferences the sixth Pacific Asia Conference on Knowledge Discovery and Data Mining PAKDD 2002 aimed to provide a forum for the sharing of original research results innovative ideas state of the art developments and implementation experiences in knowledge discovery and data mining among researchers in academic and industrial organizations Much work went into preparing a program of high quality We received 128 submissions Every paper was reviewed by 3 program committee members and 32 were selected as regular papers and 20 were selected as short papers representing a 25% acceptance rate for regular papers The PAKDD 2002 program was further enhanced by two keynote speeches delivered by Vipin Kumar from the Univ of Minnesota and Rajeev Rastogi from AT T In addition PAKDD 2002 was complemented by three tutorials XML and data mining by Kyuseok Shim and Surajit Chadhuri mining customer data across
