A Mathematics Course for Political and Social Research Will H. Moore, David A. Siegel, 2013-07-24 Political science and sociology increasingly rely on mathematical modeling and sophisticated data analysis and many graduate programs in these fields now require students to take a math camp or a semester long or yearlong course

need for universities to make postgraduate research students aware of the methodological issues that affect their work This text explores the relationship between knowledge methodology and research practice across the broad spectrum of the social sciences in language that is accessible to researchers at all levels of their research careers It follows the themes that there is no single practice or correct methodology and that the diversity and variety in terms of methodology and disciplinary focus are a sign of the sophistication and complexity of the processes of social research The text examines socio cultural contexts of social research and relates them to contemporary shifts in focus such as feminism critical theory and postmodernism The importance of selecting the research methodology most appropriate to the subject discipline concerned is emphasized

Behavioral Social Choice Michel Regenwetter, 2006-05-15 Behavioral Social Choice looks at the probabilistic foundations of collective decision making rules The authors challenge much of the existing theoretical wisdom about social choice processes and seek to restore faith in the possibility of democratic decision making In particular they argue that worries about the supposed prevalence of majority rule cycles that would preclude groups from reaching a final decision about what alternative they prefer have been greatly overstated In practice majority rule can be expected to work well in most real world settings They provide new insights into how alternative model specifications can change our estimates of social orderings
