Somatic Cell Genetics:

Techniques in Somatic Cell Genetics Jerry W. Shay, 2013-11-21 Somatic cell genetics is an exciting and rapidly expanding field of research. Since descriptions of the major experimental techniques in the field are scattered throughout various journals and other publications, there is a real need for a single reference source for both established investigators and students in the field. In addition, technical reports are frequently abridged such that many researchers are discouraged from attempting to adopt the appropriate methodology. This book therefore describes in detail the many recent technical advances in such areas of somatic cell genetics as transfer mediated by liposomes, erythrocyte ghosts, chromosomes, microcells, mitochondria, and isolated nuclear DNA. These techniques have increased our understanding of the organization and regulation of eukaryotic cells. The production of antibiotic resistant cell lines and their use in studying cytoplasmic inheritance are also included. Evidence for the cytoplasmic regulation of nuclear gene expression in eukaryotic cells is rapidly accumulating following the characterization of cytoplasmic mutations. The production of nuclear coded mutations, their use in standard cell hybridization, and recent advances in techniques for fusing whole cells or cell components are also described.

The Cells of the Body Henry Harris, 1995 This book is the first scholarly history of research into the genetics of body cells from its origins in the 19th century to the present day. Henry Harris, a well known writer and a distinguished investigator in cell biology and cancer genetics, brings an unusually informed perspective to the technical aspects of his subject. He has written a book to be enjoyed not just by professional historians of science but by working scientists in genetics, cell biology, and cancer research from the graduate student level upwards. Its readers will derive a richer understanding of how and why the cells of the body are studied in the way that they are today.

Somatic Cell Genetics, 1965 *Somatic Cell Genetics* Richard L. Davidson, 1984 *Somatic Cell Genetics* Josiah Macy, Jr. Foundation, 1964 Somatic Cell Genetics of Woody Plants M.R. Ahuja, 2012-12-06 Most forest tree species were considered recalcitrant a decade ago but now with the improved in vitro techniques, some progress has been made towards culture of tree species. Micro propagation has been achieved from the juvenile tissues of a number of forest tree species. On the other hand, tissues from most mature trees are still very difficult to grow and differentiate in vitro. Nevertheless, there has been slow but steady progress in the application of tissue culture technology for culture of tissues, organs, cells, and protoplasts of tree species. As compared to most agricultural crops and herbaceous plant species, trees are a different lot. They have long generation cycles. They are highly heterozygous and have a large reservoir of genetic variability. Because of this genetic variability, their response in vitro is also variable. On a single medium, the response of tissues from different trees, genotypes of a single species, may be quite different, some responding by induction of growth and differentiation while others showing minimal or no growth at all. That makes the somatic cell genetics of woody plants somewhat difficult but at the same time interesting.

determining the in vitro lifespan of human diploid cells as well as the relative influence of old and young cells when combined within a single cell structure The techniques and procedures discussed should make significant contributions to understanding in vitro senescence and may lead to the mapping of an area or areas of the genome linked to senescence as is being accomplished with viral transformation of normal cells Warren W Nichols Donald G Murphy i Contents Theoretic Mechanisms of in vitro Senescence 1 F MaPott Sinex Senescence in Cell Culture An Accumulation of Errors or Terminal Differentiation 13 Vincent J GPistofaZo Somatic Cell Genetics.
