recent advances in music theory in essential subfields rhythmic theory tonal structure and the theory of musical form author Jason Yust demonstrates that tonal music exhibits similar hierarchical organization in each of these dimensions Yust develops a network model for temporal structure with an application of mathematical graph theory which leads ultimately to musical applications of a multi dimensional polytope called the associahedron A wealth of analytical examples includes not only the familiar tonal canon J S Bach Mozart Schumann but also lesser known masters of the musical Enlightenment such as C P E and J C Bach Boccherini and Johann Gottlieb Graun Yust s approach has wide ranging ramifications across music theory enabling new approaches to musical closure hypermeter formal function syncopation and rhythmic dissonance as well as historical observations about the development of sonata form and the innovations of Haydn and Beethoven Making a forceful argument for the independence of musical modalities and for a multivalent approach to music analysis Organized Time establishes the aesthetic importance of structural disjunction the conflict of structure in different modalities in numerous analytical contexts
