It is estimated that the functionally significant body of knowledge for a given medical specialty changes radically every 8 years. New specialties and sub specialization are occurring at approximately an equal rate. Historically established journals have not been able either to absorb this increase in publishable material or to extend their readership to the new specialists. International and national meetings, symposia and seminars, workshops and newsletters successfully bring to the attention of physicians within developing specialties what is occurring but generally only in demonstration form without providing historical perspective, pathoanatomical correlates or extensive discussion. Page and time limitations oblige the authors to present only the essence of their material. Pediatric neurosurgery is an example of a specialty that has developed during the past 15 years. Over this period neurosurgeons have obtained special training in pediatric neurosurgery and then dedicated themselves primarily to its practice. Centers, Chairs and educational programs have been established as groups of neurosurgeons in different countries throughout the world organized themselves respectively into national and international societies for pediatric neurosurgery. These events were both preceded and followed by specialized courses, national and international journals and ever increasing clinical and investigative studies into all aspects of surgically treatable diseases of the child's nervous system. *U.S. Navy Medicine*, 1974      *Surgical Pathology of the Head and Neck, Second Edition*, Leon Barnes, 2000-11-29

Updated, reorganized and revised throughout, this highly lauded three volume reference provides an interdisciplinary approach to the diagnosis, treatment and management of head and neck diseases including the incidence, etiology, clinical presentation, pathology, differential diagnosis and prognosis for each disorder, promoting clear communication between pathologists and surgeons. Written by more than 30 internationally distinguished physicians, *Surgical Pathology of the Head and Neck, Second Edition* now contains over 1045 photographs, micrographs, drawings and tables, nearly 200 more illustrations than the first edition, five new chapters on molecular biology, fine needle aspiration, vesiculobullous diseases, neck dissections and radiation, a cumulative and expanded index in each volume. Unparalleled in scope and content by any other book available on the subject, *Surgical Pathology of the Head and Neck, Second Edition* is a must have resource for oral surgical and general pathologists, otolaryngologists, oral maxillofacial
