Retrofitting the City Stefan Bouzarovski, 2015-11-25 Cities are responsible for three quarters of the world s energy consumption If we are to reduce our demands on the planet s resources how can we make our urban areas more energy efficient One way is to refit existing buildings with more thermally efficient building materials But such retrofitting involves significant issues of social acceptance and public participation Retrofitting the City provides an important corrective to the

assumptions that have been made concerning the ability of people and places to cope with such residential transformation Drawing upon case studies from a number of European cities that have undergone far reaching change in their built environments the author shows that supposedly inadaptable people and places show a strong if often hidden degree of flexibility in responding to economic change and building transformation

The Informal City Michel S. Laguerre, 2016-07-27 In this book Michel S Laguerre argues that there exists an informal city located just beneath and in the interstices of the formal city The metaphor is not geographical but rather structural and hermeneutical This is the city where manoeuvres that cannot be done publicly legally ethically or otherwise are performed The author shows with illustrative data drawn from the American urban experience the San Francisco Oakland Metropolitan area why and how the informal city must be seen as the hidden dimension of the formal city

User needs by Systematic Elaboration (USE) Wim Heijts,2022-06-30 The design of a building can facilitate the process of use and promote the well being of users if it meets their needs Knowledge of user needs and processes of use is important for a good design However it is not self evident what these user needs really are how user needs and processes of use can be researched and how that knowledge can be used in a design This book introduces an integrated methodology for the analysis of user needs programming and evaluation that answers these questions The purpose is to improve the interaction between the users and their environment and to avoid failure costs by facilitating proper design decisions The theoretical perspective and the conceptual framework originate from environmental psychology more specifically P E fit theory The target group consists of those who are interested in creating environments for people designers users real estate managers students and scientific staff Designers are a special audience for whom the book can be a guide to working for and with users The theoretical perspective and the conceptual framework can also be relevant for scientific research into the interaction between users and buildings **Design by Competition** Jack L. Ohio State University suggests the use of pre jury evaluation PJE He shows the potential value of this approach as well as visual quality programming for many kinds of environmental design for which the client wants to convey certain desirable meanings The studies from those specific to the Wexner Center to those covering the scope of history point to an alternative method for shaping the visual form of buildings places and cities **Environmental Psychology** Linda Steg,2019-01-22
