## **Social Mobility In Europe:**

Social Mobility in Europe Richard Breen, 2004-11-25 Social Mobility in Europe is the most comprehensive study to date of trends in intergenerational social mobility. It uses data from 11 European countries covering the last 30 years of the twentieth century to analyze differences between countries and changes through time. The findings call into question several long standing views about social mobility. We find a growing similarity between countries in their class structures and rates of absolute mobility. In other words, the countries of Europe are now more alike in their flows between class origins and destinations than they were thirty years ago. However, differences between countries in social fluidity—that is, the relative chances between people of different class origins of being found in given class destinations—show no reduction, and so there is no evidence supporting theories of modernization which predict such convergence. Our results also contradict the long standing Featherman-Jones-Hauser hypothesis of a basic similarity in social fluidity in all industrial societies with a market economy and a nuclear family system. There are considerable differences between countries like Israel and Sweden where societal openness is very marked, and Italy, France, and Germany where social fluidity rates are low. Similarly, there is a substantial difference between, for example, the Netherlands in the 1970s which was quite closed, and in the 1990s when it ranks among the most open societies. Mobility tables reflect many underlying processes, and this makes it difficult to explain mobility and fluidity or to provide policy prescriptions. Nevertheless, those countries in which fluidity increased over the last decades of the twentieth century had not only succeeded in reducing class inequalities in educational attainment but had also restricted the degree to which, among people with the same level of education, class background affected their chances of gaining access to better class destinations. This publication includes the Recommendation on fostering social mobility as a contribution to social cohesion. Page 8 **New Social Mobility** Jens Schneider, Maurice Crul, Andreas Pott, 2022-06-28 This open access book comparatively analyses intergenerational social mobility in immigrant families in Europe. It is based on qualitative in-depth research into several hundred biographies and professional trajectories of young people with an immigrant working class background who made it into high prestige professions. The biographies were collected and analysed by a consortium of researchers in nine European countries from Norway to Spain. Through these analyses, the book explores the possibilities of cross-country comparisons of how trajectories are related to different institutional arrangements at the national and local level. The analysis uncovers the interaction effects between structural institutional settings and specific individual achievements and family backgrounds, and how these individuals responded to and navigated successfully through sector-specific pathways into high skilled professions such as

becoming a lawyer or a teacher By this it also explains why these trajectories of professional success and upward mobility have been so exceptional in the second generation of working class origins and it tells us a lot also about exclusion mechanisms that marked the school and professional careers of children of immigrants who went to school in the 1970s to 2000s in Europe and still do [Social Mobility in Europe \[electronic Resource.\]](#), Richard Breen,2004 *Education and*
