Rationality and the Environment Bo Eling, 2012 Environmental assessment and management involve the production of scientific knowledge and its use in decision making processes The result is that within these essentially rational political assessment frameworks experts are creating and applying scientific knowledge for decision and management purposes that actually have strong ethical and aesthetic dimensions Yet these rational political frameworks lack the tools to provide guidance on ethical and aesthetic issues that affect the wider public This revolutionary work argues that ethical and aesthetic dimensions can only be brought into environmental politics and policies by citizens actively taking a stand on the specific matters in question The author draws on Habermas's trisection of rationality as cognitive instrumental moral practical and aesthetic expressive to suggest that truly effective environmental policy needs to activate all three approaches and not favour only the rational To achieve this objective the author argues that public participation in environmental policy and assessment

is necessary to counteract the dictatorship of technical and economic instrumentality in environmental policy the failure to take ethical and aesthetic rationalities into account and more importantly how such policy is applied on the ground to shape our natural and material world

Economics as a Social Science Raimund Dietz,2024-09-30 This book explores the separation of economics from the social sciences Raimund Dietz attributes this development to the adoption of a too narrow instrumentalist perspective and demonstrates how close the mainstream is to the idea of a socialist planned economy despite all its liberal phraseology The book attempts to comprehensively reconstruct economics as catallactics explicitly including and assigning a central role to liberal forms of socialization such as exchange and money an approach that it argues is the only way to overcome the methodological deficits of the mainstream It allows monetary theory to be integrated into economic theory Further the book shows that modern societies have no choice but to organize themselves as capitalist market economies For good economic reasons money has lost its physical value over the course of time and is now merely symbolic As a result the importance of the state has also grown The author proposes that the power to create money should be consistently placed in the hands of the central bank The book offers a transformative perspective that addresses the urgent need for sustainable resource management worldwide It invites social scientists policymakers and especially economists to rethink economics and pursue a holistic approach to a more sustainable future
