## **The Computer Contradictionary:**

**The Computer Contradictionary** Stan Kelly-Bootle, 1995 Ascertain the meaning before consulting this dictionary warns the author of this collection of deliberately satirical misdefinitions New computer cultures and their jargons have burgeoned since this book's progenitor *The Devil's DP Dictionary* was published in 1981 This updated version of Stan Kelly-Bootle's romp through the data processing lexicon is a response to the Unix pandemic that has swept academia and government to the endlessly hyped panaceas offered to the MIS and to the PC explosion that has brought computer terminology to a hugely bewildered lay audience The original dictionary a pastiche of Ambrose Bierce's famous work parodied chiefly the mainframe and mini folklore of the 1950s 1960s and 1970s This revision adds over 550 new entries and enhances many of the original definitions Key targets are a host of new follies crying out for cynical lexicography including the GUI Phooey iconoclasts object orienteering and the piping of BLObs down the Clinton Gore InfoPike

**Who Invented the Computer?** Alice R. Burks, 2010-10-29 In 1973 Federal District Judge Earl R Larson issued a ruling in a patent case that was to have profound and long lasting implications for the dawning computer revolution Against all expectations the judge ruled against Sperry Rand Corp which claimed to

hold the patent on the first computer dubbed the ENIAC and was demanding huge royalties on all electronic data processing sales by Honeywell Inc and other large competitors The judge came to the conclusion that in fact the ENIAC was not the first computer but was a derivative of an obscure computer called the ABC which had been developed in the late thirties by a largely unknown professor of physics and mathematics at Iowa State University named John V Atanasoff Looking back today from our digital world at what was then a little publicized trial it is clear that the judge s decision had enormous repercussions If Judge Larson had ruled the other way in favor of the patent claim subsequent manufacturers of computing hardware would have had to obtain a license from Sperry Rand and the course of computing history would likely have been very different from the galloping revolution we have all witnessed in the past three decades This book centers on this crucial trial arguing that Judge Larson correctly evaluated the facts and made the right decision even though many in the computing community have never accepted Atanasoff as the legitimate inventor of the electronic computer With meticulous research Alice Rowe Burks examines both the trial and its aftermath presenting telling evidence in convincing and absorbing fashion and leaving no doubt about the actual originator of what has been called the greatest invention of the 20th century

**Understanding Editorial Text: A Computer Model of Argument Comprehension** Sergio J. Alvarado,2012-12-06 by Michael G Dyer Natural language processing NLP is an area of research within Artificial Intelligence AI concerned with the comprehension and generation of natural language text Comprehension involves the dynamic construction of conceptual representations linked by causal relationships and organized indexed for subsequent retrieval Once these conceptual representations have been created comprehension can be tested by means of such tasks as paraphrasing question answering and summarization Higher level cognitive tasks are also modeled within the NLP paradigm and include translation acquisition of word meanings and concepts through reading analysis of goals and plans in multi agent environments e g coalition and counterplanning behavior by narrative characters invention of novel stories recognition of abstract themes such as irony and hypocrisy extraction of the moral or point of a story and justification refutation of beliefs through argumentation The robustness of conceptually based text comprehension systems is directly related to the nature and scope of the knowledge constructs applied during conceptual analysis of the text Until recently conceptually based natural language systems were developed for and applied to the task of narrative comprehension Dyer 1983a Schank and Abelson 1977 Wilensky 1983 These systems worked by recognizing the goals and plans of narrative characters and using this knowledge to build a conceptual representation of the narrative xx UNDERSTANDING EDITORIAL TEXT including actions and intentions which must be inferred to complete the representation A large portion of text appearing in newspapers and magazines however is editorial in nature *Psychological Assessment With the MMPI-2* Alan F. Knowledge Production and Contradictory Functions in African Higher Education Cloete, Nico, Maassen, Peter,2015-03-01 Reviews This volume brings together excellent scholarship and innovative policy discussion to demonstrate the essential role of higher education in the development of Africa and of the world at large Based on deep knowledge of the university system in several African countries this book will reshape the debate on development in the global information economy for years to come It should be mandatory reading for academics policy makers and concerned citizens in Africa and elsewhere Manuel Castells Professor Emeritus University of California at Berkeley Laureate of the Holberg Prize 2012 and of the Balzan Prize 2013 The dominant global discourse in higher education now focuses on world class universities inevitably located predominantly in North America Europe and increasingly East Asia The rest of the world including Africa is left to play catch up But that discourse should focus rather on the tensions even contradictions between excellence and engagement with which all universities must grapple Here the African experience has much to offer the high participation and generously resourced systems of the so called developed world This book offers a critical review of that experience and so makes a major contribution to our understanding of higher education Sir Peter Scott former editor of Times Higher Education and Professor of Higher Education Studies University College London Institute of Education

**Logic for Computer Science and Artificial Intelligence** Ricardo Caferra,2013-02-04 Logic and its components propositional first order non classical play a key role in Computer Science and Artificial Intelligence While a large amount of information exists scattered throughout various media books journal articles webpages etc the diffuse nature of these sources is problematic and logic as a topic benefits from a unified approach Logic for Computer Science and

Artificial Intelligence utilizes this format surveying the tableaux resolution Davis and Putnam methods logic programming as well as for example unification and subsumption For non classical logics the translation method is detailed Logic for Computer Science and Artificial Intelligence is the classroom tested result of several years of teaching at Grenoble INP Ensimag It is conceived to allow self instruction for a beginner with basic knowledge in Mathematics and Computer Science but is also highly suitable for use in traditional courses The reader is guided by clearly motivated concepts introductions historical remarks side notes concerning connections with other disciplines and numerous exercises complete with detailed solutions The title provides the reader with the tools needed to arrive naturally at practical implementations of the concepts and techniques discussed allowing for the design of algorithms to solve problems

**Formal Methods in Computer-Aided Design** Warren A. Jr. Hunt, Steven D. Johnson, 2007-11-29 The biannual Formal Methods in Computer Aided Design conference FMCAD 2000 is the third in a series of conferences under that title devoted to the use of discrete mathematical methods for the analysis of computer hardware and so ware The work reported in this book describes the use of modeling languages and their associated automated analysis tools to specify and verify computing systems Functional verification has become one of the principal costs in a modern computer design effort In addition verification of circuit models timing power etc requires even more effort FMCAD provides a venue for academic and industrial researchers and practitioners to share their ideas and experiences of using discrete mathematical modeling and verification It is noted with interest by the conference chairmen how this area has grown from just a few people 15 years ago to a vibrant area of research development and deployment It is clear that these methods are helping reduce the cost of designing computing systems As an example of this potential cost reduction we have invited David Russino of Advanced Micro Devices Inc to describe his verification of floating point algorithms being used in AMD microprocessors The program includes 30 regular presentations selected from 63 submitted papers

Concepts of Proof in Mathematics, Philosophy, and Computer Science Dieter Probst, Peter Schuster, 2016-07-25 A proof is a successful demonstration that a conclusion necessarily follows by logical reasoning from axioms which are considered evident for the given context and agreed upon by the community It is this concept that sets mathematics apart from other disciplines and distinguishes it as the prototype of a deductive science Proofs thus are utterly relevant for research teaching and communication in mathematics and of particular interest for the philosophy of mathematics In computer science moreover proofs have proved to be a rich source for already certified algorithms This book provides the reader with a collection of articles covering relevant current research topics circled around the concept proof It tries to give due consideration to the depth and breadth of the subject by discussing its philosophical and methodological aspects addressing foundational issues induced by Hilbert's Programme and the benefits of the arising formal notions of proof without neglecting reasoning in natural language proofs and applications in computer science such as program extraction
