Collen, Marion J. Ball, 2015-10-08 This is a meticulously detailed chronological record of significant events in the history of medical informatics and their impact on direct patient care and clinical research offering a representative sampling of published contributions to the field The History of Medical Informatics in the United States has been restructured within this new edition reflecting the transformation medical informatics has undergone in the years since 1990 The systems that were once exclusively institutionally driven hospital multihospital and outpatient information systems are today joined by systems that are driven by clinical subspecialties nursing pathology clinical laboratory pharmacy imaging and more At the core is the person not the clinician not the institution whose health all these systems are designed to serve A group of world renowned authors have joined forces with Dr Marion Ball to bring Dr Collen s incredible work to press These recognized leaders in medical informatics many of whom are recipients of the Morris F Collen Award in Medical Informatics and were friends of or mentored by Dr Collen carefully reviewed editing and updating his draft chapters This has resulted in the most thorough history of the subject imaginable and also provides readers with a roadmap for the subject well into later in the century

The Digitalization of Healthcare Ian P. McLoughlin, Karin Garrety, Rob Wilson, 2017-01-19 Electronic health records are widely regarded as the connective tissue of any modern healthcare system For some they represent a dangerous enthusiasm and for others a key enabler of disruptive innovation Many governments have made major policy and financial investments in digitalizing health records but their implementation has frequently run into opposition from doctors had lukewarm responses from patients and raised considerable concerns for privacy advocates and others worried by the security of sensitive health data and the risks of national data bases This book draws upon the concept of orders of worth to reveal the moral dimensions of the medical division of labour and to delve deeper into understanding why electronic records have been so difficult to implement and the sources of opposition to them The authors argue that digitalization disrupts the moral orders which define rights and responsibilities for the sharing and exchanging of patient medical data This is illustrated through longitudinal studies of two of the most controversial attempts to introduce national systems a patient controlled electronic record in Australia and a national summary care record that was part of the ill fated NHS national program for IT in England The authors conclude by using the lessons from these national experiences and insights from two regional projects in each country to suggest how the idea of electronic records might be re thought It is a must read for anyone concerned about health information and the implications of how it is shared and exchanged in a digital world **Building a Better Delivery System** Institute of Medicine, National Academy of Engineering, 2005-10-20 In a joint effort between the National Academy of Engineering and the Institute of Medicine this books attempts to bridge the knowledge awareness

divide separating health care professionals from their potential partners in systems engineering and related disciplines The goal of this partnership is to transform the U S health care sector from an underperforming conglomerate of independent entities individual practitioners small group practices clinics hospitals pharmacies community health centers et al into a high performance system in which every participating unit recognizes its dependence and influence on every other unit By providing both a framework and action plan for a systems approach to health care delivery based on a partnership between engineers and health care professionals Building a Better Delivery System describes opportunities and challenges to harness the power of systems engineering tools information technologies and complementary knowledge in social sciences cognitive sciences and business management to advance the U S health care system **Health Reform, Health Records,**
