Tinker, 2015-12-21 The oil palm is the world's most valuable oil crop Its production has increased over the decades reaching 56 million tons in 2013 and it gives the highest yields per hectare of all oil crops Remarkably oil palm has remained profitable through periods of low prices Demand for palm oil is also expanding with the edible demand now complemented by added demand from biodiesel producers The Oil Palm is the definitive reference work on this important crop This fifth edition features new topics including the conversion of palm oil to biodiesel and discussions about the impacts of palm oil production on the environment and effects of climate change alongside comprehensively revised chapters with updated references throughout The Oil Palm Fifth Edition will be useful to researchers plantation and mill managers who wish to understand the science underlying recommended practices It is an indispensable reference for agriculture students and all those working in the oil palm industry worldwide *A Contribution to the Study of the Oil Palm, *Elaeis Guineensis* Jacq*, 1922 **The Oil Palm Genome** Maizura Ithnin, Ahmad Kushairi, 2020-06-12 This book compiles the fundamental advances resulting from oil palm genome and transcriptome sequencing and describes the challenges faced and strategies applied in sequencing assembling and annotating oil palm genome sequences The availability of genome and transcriptome data has made the mining of a high number of new molecular markers useful for genetic diversity as well as marker trait association studies and the book presents high throughput genotyping platforms which allow the detection of QTL regions associated with interesting oil palm traits such as oil unsaturation and yield components using classical genetic and association mapping approaches Lastly it also presents the discovery of major genes governing economically important traits of the oil palm Covering the history of oil palm expansion classical and molecular cytogenetics improvements based on wild and advanced genetic materials and the science of oil palm breeding the book is a valuable resource for scientists involved in plant genetic research **Plant Breeding Reviews, Volume 22** Jules Janick, 2003-03-05 Plant Breeding Reviews Volume 22 presents state of the art reviews on plant genetics and the breeding of all types of crops by both traditional means and molecular methods The emphasis of the series is on

methodology a practical understanding of crop genetics and applications to major crops *Prospection and Collection in the Oil Palm (Elaeis Guineensis Jacq)*. J. J. Hardon, Botany General description Specific characters Distribution and population structure Genetic basic of present oil palm breeding populations Past collection Strategy of exploration and collection Seed preparation storage and germination Pollen storage and viability tests Maintenance of collection Achieving sustainable cultivation of oil palm Volume 1 Prof. Alain Rival, 2018-02-09 Experts from key organisations such as the RSPO identify key production trends and challenges Reviews latest developments in conventional and marker assisted breeding as well as transgenic approaches Assesses ways of assessing and optimising yields through techniques such as better nutrient and soil management **The Oil Palm** Charles William Stewart Hartley, 1967 **Biofuel Crops** Bharat P. Singh, 2013 Providing comprehensive coverage on biofuel crop production and the technological environmental and resource issues associated with a sustainable biofuel industry this book is ideal for researchers and industry personnel Beginning with an introduction to biofuels and the challenges they face the book then includes detailed coverage on crops of current importance or with high future prospects including sections on algae sugar crops and grass oil and forestry species The chapters focus on the genetics breeding cultivation harvesting and handling of each crop Breeding and Biotechnology of Leaf, Fruit, and Seed Fiber Crops Khaled F. M. Salem, Jameel M. Al-Khayri, Shri Mohan Jain, 2025-11-14 The basic concept of this book is to study the use of both innovative and conventional plant breeding methods to develop new varieties of leaf fruit and seed fiber crops under different environmental conditions for sustainable fiber production The book covers 14 genera including Musa Agave Trifolium Phoenix Hyphaene Ananas Metroxylon Arenga Yucca Citrus Cocos Elaeis Gossypium and Ceiba Chapters are written by internationally respected scholars and go through a review process to ensure quality presentation and scholarly accuracy Each chapter begins with an introduction covering relevant backgrounds and provides an in depth discussion of the topic supported by high quality color photographs illustrations and relevant data The chapter concludes with recommendations for future research directions and a comprehensive list of relevant references to facilitate further reading The book will be an excellent reference resource for breeders involved in fiber crop breeding programs that involve biotechnology and molecular tools alongside conventional breeding It is suitable for both undergraduate and advanced graduate students majoring in agriculture biotechnology and molecular breeding **Legumes and Oilseed Crops I** Y. P. S. Bajaj, 2012-12-06 **Oil Palm Breeding** Aik Chin Soh, Sean Mayes, Jeremy A. Roberts, 2017-08-14 The oil palm is a remarkable crop producing around 40% of the world's vegetable oil from around 6% of the land devoted to oil crops Conventional breeding has clearly been the major focus of genetic improvement in this crop A mix of improved agronomy and management coupled with breeding selection have quadrupled the oil yield of the crop since breeding began in earnest in the 1920s However as for all perennial crops with long breeding cycles oil palm faces immense challenges in the coming years with increased pressure from population growth climate change and the need to develop environmentally sustainable oil

palm plantations In Oil Palm Breeding Genetics and Genomics world leading organizations and individuals who have been at the forefront of developments in this crop provide their insights and experiences of oil palm research while examining the different challenges that face the future of the oil palm The editors have all been involved in research and breeding of oil palm for many years and use their knowledge of the crop and their disciplinary expertise to provide context and to introduce the different research topics covered

Genetic Diversity and Erosion in Plants M.R. Ahuja,S. Mohan Jain,2015-12-16 Genetic erosion is the loss of genetic diversity within a species It can happen very quickly due to catastrophic events or changes in land use leading to habitat loss But it can also occur more gradually and remain unnoticed for a long time One of the main causes of genetic erosion is the replacement of local varieties by modern varieties Other causes include environmental degradation urbanization and land clearing through deforestation and brush fires In order to conserve biodiversity in plants it is important to targets three independent levels that include ecosystems species and genes Genetic diversity is important to a species fitness long term viability and ability to adapt to changing environmental conditions Chapters in this book are written by leading geneticists molecular biologists and other specialists on relevant topics on genetic erosion and conservation genetic diversity in plants This divisible set of two volumes deals with a broad spectrum of topics on genetic erosion and approaches to biodiversity conservation in crop plants and trees Volume 1 deals with indicators and prevention of genetic erosion while volume 2 covers genetic diversity and erosion in a number of plants species These two volumes will also be useful to botanists biotechnologists environmentalists policy makers conservationists and NGOs working to manage genetic erosion and biodiversity
