What is Misrepresentation? Krystyna

Bielecka,2025-05-23 This book aims to justify and systematize the desiderata that a satisfying philosophical account of mental representations should meet which is consistent with common sense practice and scientific research According to the author the most important aspect of any satisfactory account of mental representation is the ability to determine that a given representation is incorrect and to identify the nature of the error The book analyzes selected contemporary theories of mental representations with respect to major desiderata as well as the minor desiderata that they subsume discussing the requirements for the philosophical accounts of particular types of mental representations Since none of the previously proposed concepts meet this requirement satisfactorily the author proposes an alternative theory of misrepresentation which is based on the idea that epistemic accuracy is what minds care about According to the author s findings cognitive systems rely on complex devices to check for coherence between these representations In turn the ideas presented here support the active role of mental representation in practice as an error checking device in agreement with previous teleosemantics accounts

Non-Propositional Intentionality Alex Grzankowski,Michelle Montague,2018-07-19 The mind is directed upon the world There are worldly things that we have beliefs about and things in the world we desire to have happen We find some things fearsome and others likable The puzzle of intentionality how it is that our minds make contact with the world is one of the oldest and most vexed issues facing philosophers Many contemporary philosophers and cognitive scientists have been attracted to the idea that our minds represent the world This book explores an important assumption about representation namely that when we represent things in the world we represent them as having properties and in this way our representations have propositional structure The contributors examine what the commitment to propositionalism amounts to illuminate why one might find the thesis attractive or unattractive and consider ways in which one might depart from

propositionalism The hope is that this will lead towards a more complete understanding of how the mind and world are connected

The Biology of Computer Life SIMONS, 2012-12-06 The doctrine of computer life is not congenial to many people Often they have not thought in any depth about the idea and it necessarily disturbs their psychological and intellectual frame of reference it forces a reappraisal of what it is to be alive what it is to be human and whether there are profound yet unexpected implications in the development of modern computers There is abundant evidence to suggest that we are witnessing the emergence of a vast new family of life forms on earth organisms that are not based on the familiar metabolic chemistries yet whose manifest life credentials are accumulating year by year It is a mistake to regard biology as a closed science with arbitrarily limited categories and we should agree with Jacob 1974 who observed that Contrary to what is imagined biology is not a unified science Biology is essentially concerned with living things and we should be reluctant to assume that at any one time our concept and understanding of life are complete and incapable of further refinement And it seems clear that much of the continuing refinement of biological categories will be stimulated by advances in systems theory and in particular by those advances that relate to the rapidly expanding world of computing and robotics We should also remember what Pant in 1968 said in a different context the biological sciences are unrestricted and their investigator must be prepared to follow their problems into any other science whatsoever

Creating Personalities for Synthetic Actors Robert Trappl, Paolo Petta, 1997-03-20 Progress in computer animation has gained such a speed that before long computer generated human faces and figures on screen will be indistinguishable from those of real humans The potential both for scripted films and real time interaction with users is enormous However in order to cope with this potential these faces and figures must be guided by autonomous personality agents This carefully arranged volume presents the state of the art in research and development in making synthetic actors more autonomous The papers describe the different approaches and solutions developed by computer animation specialists computer scientists experts in AI psychologists and philosophers from leading laboratories world wide Finally a bibliography comprising more than 200 entries enable further study

Nineteen Eighty-Four: Science Between Utopia and Dystopia E. Mendelsohn, H. Nowotny, 2012-12-06 Just fifty years ago Julian Huxley the biologist grandson of Thomas Henry Huxley published a book which easily could be seen to represent the prevailing outlook among young scientists of the day *If I were a Dictator* 1934 The outlook is optimistic the tone playfully rational the intent clear allow science a free hand and through rational planning it could bring order out of the surrounding social chaos He complained however At the moment science is for most part either an intellectual luxury or the paid servant of capitalist industry or the nationalist state When it and its results cannot be fitted into the existing framework it and they are ignored and furthermore the structure of scientific research is grossly lopsided with over emphasis on some kinds of science and partial or entire neglect of others pp 83-84 All this the scientist dictator would set right A new era of scientific humanism would provide alternative visions to the traditional religions with their Gods and the civic religions such as Nazism and fascism Science in Huxley's version carries in it the twin impulses of the utopian imagination Power and Order Of course it was exactly this vision of science which led that other grand son of Thomas Henry Huxley the writer Aldous Huxley to portray scientific discovery as potentially subversive and scientific practice as ultimately enslaving

Counterfactual Thought Experiments in World Politics Philip E. Tetlock, Aaron Belkin, 2020-06-30 Political scientists often ask themselves what might have been if history had unfolded differently if Stalin had been ousted as General Party Secretary or if the United States had not dropped the bomb on Japan Although scholars sometimes scoff at applying hypothetical reasoning to world politics the contributors to this volume including James Fearon Richard Lebow Margaret Levi Bruce Russett and Barry Weingast find such counterfactual conjectures not only useful but necessary for drawing causal inferences from historical data Given the importance of counterfactuals it is perhaps surprising that we lack standards for evaluating them To fill this gap Philip Tetlock and Aaron Belkin propose a set of criteria for distinguishing plausible from implausible counterfactual conjectures across a wide range of applications The contributors to this volume make use of these and other criteria to evaluate counterfactuals that emerge in diverse methodological contexts including comparative case studies game theory and statistical analysis Taken together these essays go a long way toward establishing a more nuanced and rigorous framework for assessing counterfactual arguments about world politics in particular and about the social sciences more broadly

Consciousness, Attention, and Conscious Attention Carlos Montemayor, Harry Haroutioun Haladjian, 2024-06-11 A rigorous analysis of current empirical and theoretical work supporting the argument that consciousness and attention are largely dissociated In this book Carlos Montemayor and Harry Haladjian consider the relationship between consciousness and attention The cognitive mechanism of attention has often been compared to consciousness because attention and consciousness appear to share similar qualities But Montemayor and Haladjian point out attention is defined functionally whereas consciousness is generally defined in terms of its phenomenal character without a clear functional purpose They offer new insights and proposals about how best to understand and study the relationship between consciousness and attention by examining their functional aspects The book's ultimate conclusion is that consciousness and attention are largely dissociated Undertaking a rigorous analysis of current empirical and theoretical work on attention and consciousness Montemayor and Haladjian propose a spectrum of dissociation a framework that identifies the levels of dissociation between consciousness and attention ranging from identity to full dissociation They argue that conscious attention the focusing of attention on the contents of awareness is constituted by overlapping but distinct processes of consciousness and attention Conscious attention they claim evolved after the basic forms of attention increasing access to the richest kinds of cognitive contents Montemayor and Haladjian's goal is to help unify the study of consciousness and attention across the disciplines A focused examination of conscious attention will they

believe enable theoretical progress that will further our understanding of the human mind **Toward Human-Level Artificial Intelligence** Philip C.
