

networks into the social structure accounts for the set of observable transformations as presented in the preceding section. Or, in other words, how and why information networks constitute the backbone of the network society.

THE ROLE OF INFORMATION NETWORKS IN SHAPING RELATIONSHIPS OF PRODUCTION, CONSUMPTION, POWER, EXPERIENCE, AND CULTURE

Information networks, as defined above, contribute, to a large extent, to the transformation of social structure in the information age. To be sure, this multidimensional transformation has other sources that interact with the specific effect of information networks, as mentioned above. Yet, in this analysis, I will focus on the specificity of the interaction between this new social morphology and the evolution of social structure. I will be as parsimonious as possible, trying to avoid repetition of arguments and observations already presented in this text.

A social structure is transformed when there is simultaneous and systemic transformation of relationships of production/consumption, power, and experience, ultimately leading to a transformation of culture. Information networks play a substantial role in the set of transformations I have analysed in my work and summarized here. This is how and why.

Relationships of Production

Although I suppose information networks will shape, eventually, other modes of production, for the time being we can only assess their effect in the capitalist mode of production. Networks change the two terms of the relationship (capital, labour), and their relationship. They transform capital by organizing its circulation in global networks and making it the dominant sphere of capital – the one where value, from whichever origin, increases (or decreases) and is ultimately realized. Global financial markets are information networks. They constitute themselves into a collective ‘capitalist’, independent from any specific capitalist (but not indifferent to), and activated by rules that are only partly market rules. In this sense, capital in the Information Age has become a human-made automaton, which, through mediations, imposes its structural determination to relationships of production. More specifically, global financial markets and their management networks constitute an automated network, governed by interactions between its multiple nodes, propelled by a combination of market logic, information turbulences, and actors’ strategies and bets (see Castells 2000b).

Relationships between capital and labour (all kinds of capital, all kinds of labour) are organized around the network enterprise form of production. This network enterprise is also globalized at its core, through telecommunications and transportation networks. Thus, the work process is
