PHYS 2210 — Prof. Wiggins

Courage is your best defense now...—Gandalf

All formulas will be given on the actual exam. You should not need to memorize anything for the exam. The list below is not fully exhaustive, but it's my best, good-faith attempt to be thorough. Hopefully this document helps you identify areas for potential study. Your best resource in studying for the final is your **previous exams**.

Test I: Fluids

- Derive density of a substance given the volume a specified mass occupies
- Use the fact that pressure increases *linearly* with density to solve problems, i.e. use $P = P_0 + \rho g d$.
- Use the fact that pressure in a static fluid is only a function of depth from the surface, regardless of other factors. *Compare two cylindrical tanks filled with water to the same depth, but having different radii...*
- Calculate pressure at some depth in a stack of multiple types of fluids
- Solve manometer problems, and successfully intuit relative levels of fluid in a manometer to compare vapor and atmospheric pressures
- Solve barometer problems
- Identify pressure effects from the atmosphere, e.g. the atmosphere is responsible for hoisting fluid up a straw
- Calculate the buoyant force from its definition $F_B = \rho V g$
- Correctly deduce that $mg = F_B$ for statically floating objects and exploit this to solve buoyancy problems, *how much of the volume of the solid is submerged, etc.*
- Successfully explain the difference between *gauge pressure* and *absolute pressure*
- Use the continuity equation $A_1 v_1 = A_2 v_2$ to calculate fluid velocity
- Be able to explain the origin of the continuity equation: *assumption of incompressibility, same "through-put" required at all sequential points in a pipe, vA is a volume flow rate, etc.*
- Use Bernoulli's equation, $P_1 + \frac{1}{2}\rho v_1^2 + \rho g y_1 = P_2 + \frac{1}{2}\rho v_2^2 + \rho g y_2$, to solve a variety of problems.

Test II: Oscillations, Waves, Sound, Light and Optics

Oscillations

- Describe oscillations mathematically using $x(t) = A \sin(\omega t + \phi)$
- Use the definitions of frequency, angular frequency, period, phase shift and amplitude to solve oscillation problems.

Interface and Advanced Database Applications **A Culture of Conspiracy** Michael Barkun, 2013-08-15 American society has changed dramatically since *A Culture of Conspiracy* was first published in 2001. In this revised and expanded edition Michael Barkun delves deeper into America's conspiracy sub culture exploring the rise of 9/11 conspiracy theories, the birther controversy surrounding Barack Obama's American citizenship and how the conspiracy landscape has changed with the rise of the Internet and other new media. What do UFO believers, Christian millennialists and right wing conspiracy theorists have in common? According to Michael Barkun, in this fascinating yet disturbing book, quite a lot. It is well known that some Americans are obsessed with conspiracies. The Kennedy assassination, the Oklahoma City bombing and the 2001 terrorist attacks have all generated elaborate stories of hidden plots. What is far less known is the extent to which conspiracist worldviews have recently become linked in strange and unpredictable ways with other fringe notions such as a belief in UFOs, Nostradamus and the Illuminati. Unraveling the extraordinary genealogies and permutations of these increasingly widespread ideas, Barkun shows how this web of urban legends has spread among subcultures on the Internet and through mass media, how a new style of conspiracy thinking has recently arisen and how this phenomenon relates to larger changes in American culture. This book, written by a leading expert on the subject, is the most comprehensive and authoritative examination of contemporary American conspiracism to date. Barkun discusses a range of material involving inner earth caves, government black helicopters, alien abductions, secret New World Order cabals and much more that few realize exists in our culture. Looking closely at the manifestations of these ideas in a wide range of literature and source material from religious and political literature to New Age and UFO publications to popular culture phenomena such as *The X-Files* and to websites, radio programs and more, Barkun finds that America is in the throes of an unrivaled period of millenarian activity. His book underscores the importance of understanding why this phenomenon is now spreading into more mainstream segments of American culture. Documents Accompanying the Journal Michigan. Legislature. The Silly Season Susan Holtzer, 2000-04-15 Strange lights in the Michigan sky. The gathering horde of psychics, alien abductees and millennialists swear it's an authentic UFO hovering over UM. But to student and Daily Sports reporter Zoe Kaplan, the sightings look like a group of fireflies mating. The controversy deepens when history professor Thomas Edison Stempel, a dedicated ufologist, suspects that someone is trying to discredit his extensive research. His arch-enemy, biochemistry professor Conrad deLeeuw, thinks Stempel set the whole thing up, and fanatic Jarvis McCray claims documented proof of alien government conspiracy. Was it a hoax or a cleverly designed plot to kill? Police lieutenant Karl Genesko is stymied while his fiancée, computer consultant Anneke Haagen, is amused and Zoe is thrilled at the chance to string the story for the AP. But when Professor Stempel turns up electrocuted on a wide swath of burned field, the silly summer season turns deadly. Genesko sets out to trap the killer with a trap so dangerous he may not survive to tell the tale. **Annual Department of Defense**
