**Grasshopper Song** Mary Ellicott Arnold,Mabel Reed,1980-01-01 In 1908 two young women the authors of this book accepted Indian Service appointments as field matrons for the Karok Indians in the Klamath and Salmon River country of northern California Although the area had been the scene of a gold rush some fifty years earlier they write in the foreword the social life of the Indian what he believed and the way he felt about things was very little affected by white influence The older Indians still had the spaced tatoo marks on their forearms by which they could measure the length of the string of wampum required to buy a wife The white men we knew on the Rivers were pioneers of the Old West All around us was gold country the land of the saloon and of the six shooter Our friends and neighbors carried guns as a matter of course and used them on occasion But the account given in these pages is not of these occurrences but of everyday life on the frontier in an Indian village and what Indians and badmen did and said when they were not engaged in wiping out their friends and neighbors It is also the account of our own two years in Indian country where in the sixty mile stretch between Happy Camp and Orleans we were the only white women and most of the time quite scared enough to satisfy anybody *The*

Rosemary Grant,Peter R. Grant,1989-11-14 The

result of one of the most detailed and careful examinations of the behavior and ecology of a vertebrate ever conducted in the wild this study addresses one of the major questions in evolutionary biology why do some populations vary so much in morphological ecological behavioral and physiological traits By documenting the full range of variation within one population of a species and investigating the causal factors Rosemary and Peter Grant provide impressive evidence that species are capable of evolutionary change within observable periods of time Among the most dramatic examples of recent speciation and adaptive diversification are Darwin's Finches which live in the Galapagos Islands Darwin theorized that these closely related birds had evolved from a common ancestor to fill the available ecological niches on this remote archipelago Not only have they evolved into thirteen species but more recent study has shown that many of them exhibit striking variation in beak structure and other traits For more than a decade the Grants have studied one of these species the large cactus finch on the isolated Isla Genovesa They present information on the environment and demographic features of the population then discuss the range of genetic ecological and behavioral factors responsible for the unusually large morphological variation They place the large cactus finch in its community setting to better understand its evolution and conclude by discussing the implications of the study for the genetic structure of small populations and the problems of conserving them They illustrate their findings with an array of drawings tables and photographs
