 Archibald Geikie,1917 Visions of Science James A. Secord,2015-04-03 The first half of the nineteenth century witnessed
 an extraordinary transformation in British political literary and intellectual life There was widespread social unrest and
 debates raged regarding education the lives of the working class and the new industrial machine governed world At the same
 time modern science emerged in Europe in more or less its current form as new disciplines and revolutionary concepts
 including evolution and the vastness of geologic time began to take shape In Visions of Science James A Secord offers a new
 way to capture this unique moment of change He explores seven key books among them Charles Babbage s Reflections on
 the Decline of Science Charles Lyell s Principles of Geology Mary Somerville s Connexion of the Physical Sciences and
 Thomas Carlyle s Sartor Resartus and shows how literature that reflects on the wider meaning of science can be revelatory
 when granted the kind of close reading usually reserved for fiction and poetry These books considered the meanings of
 science and its place in modern life looking to the future coordinating and connecting the sciences and forging knowledge
 that would be appropriate for the new age Their aim was often philosophical but Secord shows it was just as often
 imaginative projective and practical to suggest not only how to think about the natural world but also to indicate modes of
 action and potential consequences in an era of unparalleled change Visions of Science opens our eyes to how genteel ladies
 working men and the literary elite responded to these remarkable works It reveals the importance of understanding the
 physical qualities of books and the key role of printers and publishers from factories pouring out cheap compendia to
 fashionable publishing houses in London s West End Secord s vivid account takes us to the heart of an information revolution
 that was to have profound consequences for the making of the modern world Catalogue of Works on European Philology
 and the Minor European Languages Bernard Quaritch,1878 **Cavendish** Christa Jungnickel,Russell McCormmach,1996
 The Cavendishes flourished during the high tide of British aristocracy following the revolution of 1688 89 and the case can be
 made that this aristocracy knew its finest hour when Henry Cavendish gently laid his delicate weights in the pan of his
 incomparable precision balance For this it took two generations and two kinds of invention one in social forms and the other
 in scientific technique This biography tells how it came to pass Book jacket Marshall Hall (1790-1857) Diana E.
 Manuel,2020-01-29 Marshall Hall was trained as a physician in the early nineteenth century scientifically oriented University
 of Edinburgh Medical School The son of a Methodist cotton manufacturer and bleacher at Nottingham Hall believed that in

science lay the future for progress in medicine Following early work on diagnosis on women s disorders and on blood letting Hall came to specialise in the nervous system and in particular on the concept of reflex action For Hall who proposed a mechanistic explanation of reflex action Galenic animal spirits and souls in decapitated creatures were out A superb experimentalist Hall strove to establish experimental medicine physiology as the basis of the medical curriculum instead of anatomy the long standing domain of the surgeons They were among the strongest critics of Hall s vivisection procedures despite his efforts to establish a Code of Practice Hall was involved in several controversies within and without the Royal Society where he was victimised by its Physiological Committee He addressed a range of social and public health issues including the abolition of slavery and devised a new method of resuscitation and a more sensitive physiological test for strychnine detection He also proposed plans for improving and linking sewage disposal and the transport system of the metropolis
