Slope Instability Denys Brunsdan, David B. Prior, 1984 **Slope Stability Engineering** Institution of Civil Engineers (Great Britain), 1991-04-15 This volume draws on the experience and extensive research of an international authorship to bring together details on slope stability causes of landslides landslide prevention new techniques for assessing and predicting stability new methods for stabilising slopes and the special considerations for coastal situations *Clay and Shale Slope Instability* William C. Haneberg, Scott A. Anderson, Geological Society of America. Division of Engineering Geology, 1995 Ten papers address both empirical and analytical aspects of clay and shale slope instability Among the topics discussed in detail are limit equilibrium stability analysis shear strength of clay and clayey colluvium use of triaxial test data to evaluate viscoplastic slope movements numerical modeling of pore pressure distribution in heterogeneous soils rational analysis of rainfall and landslide movement patterns the effects of hydrothermal alteration on slope stability mudrock durability and stability considerations and regional clay and shale slope stability problems in Italy **Slope Stability and Erosion Control: Ecotechnological Solutions** Joanne E. Norris, Alexia Stokes, Slobodan B. Mickovski, Erik Cammeraat, Rens van Beek, Bruce C. Nicoll, Alexis Achim, 2008-02-29 This chapter describes the processes involved in the transport of material over hillslopes Hillslopes provide the gradients enabling material to be transported from the slopes themselves towards the valley bottoms directly by gravity alone or by water flowing down over the surface Gravity has the potential to transfer material downslope if the material resistance to counteract it is insufficient Similarly water and wind flowing along the surface exert a drag on soil particles and have the potential to entrain material After the gradient has fallen below a critical threshold to keep the material in transport deposition occurs Conventionally slope processes in which gravity alone is the dominant transporting agent are called mass movements Brunsdan 1984 Processes in which other agents dominate are called erosion e.g wind or water erosion Flowing water is an important transporting agent on which the emphasis is placed here Although mass wasting is a natural process its incidence and impact may be exacerbated by human activities Crozier 1986 Morgan 2005 A situation may ultimately arise in which human interests become unsafe or unsustainable This impact is not only directly felt in the areas where material is removed or deposited and indirectly mass wasting may have an effect on soil and water quality in areas located further downstream In the following sections a brief overview is given of the mechanisms morphology causes and consequences of mass movements and erosion *Landforming* Horst J. Schor, Donald H. Gray, 2007-08-07 The first hands on instruction guide to landform grading and revegetation Landform grading provides a cost effective attractive and environmentally compatible way to construct slopes and other landforms that are stable and that blend in with the natural surroundings Landform grading design and construction technology have advanced rapidly during the past decade and this book explains the technique its uses its various applications and its significant advantages Landforming An Environmental Approach to Hillside Development Mine Reclamation and Watershed Restoration presents
