Boulton, 2001-08-23 The book is a collection of nine papers on disparate topics in finance and economics Topics range from the development of a supply and demand model for common stocks to the centuries old conflict between mercantilism and liberal trade regimes One essay goes to great length in critiquing the conventional notion that inflation solely derives from monetary policy using the past 30 years as an illustrative example Throughout the text the author continually attempts to merge the world of finance with that of economics while coupling both with historical

experience The author additionally brings his own long standing practical experience in the financial markets to point out where academic wisdom doesn't quite mesh with market realities The collective contents in conjunction with other work resulted in the author being elected to Beta Gamma Sigma the business school equivalent of Phi Beta Kappa Since the author is first and foremost a pragmatic investor his perspective on financial and economic theory is generally focused on their practical application which was the genesis behind the approach taken in writing this book's contents Market Timing with Moving Averages Valeriy Zakamulin, 2017-11-17 This book provides a comprehensive guide to market timing using moving averages Part I explores the foundations of market timing rules presenting a methodology for examining how the value of a trading indicator is computed Using this methodology the author then applies the computation of trading indicators to a variety of market timing rules to analyse the commonalities and differences between the rules Part II goes on to present a comprehensive analysis of the empirical performance of trading rules based on moving averages
