

SEMANTICS

Semantics is the branch of linguistics that deals with studying meaning in language. It examines the meaning of words, phrases, sentences, and language.

OVERVIEW

Semantics looks at literal and implied meanings, the connotations words may carry, and how these meanings can change across different contexts. It also studies the relationships between words and phrases, like synonymy (words with the same or similar meanings), antonymy (words with opposite meanings), and polysemy (words or phrases with multiple, related meanings).

EXAMPLE

Interpreting Irony: Irony refers to when someone says one thing but means another, often conveying implied criticism or sarcasm. For example, if someone says, "What a great day!" while standing in pouring rain, this would be ironic because it implies disappointment with the current situation despite saying otherwise through their words.

Studies In Comparative Semantics:

Studies in Comparative Semantics Paul Canart, 1979-01-01 **The Semantics of Derivational Morphology** Sven Kotowski, Ingo Plag, 2023-02-20 This volume brings together cutting edge research on the semantic properties of derived words and the processes by which these words are derived To this day many of these processes remain under researched and the nature of meaning in derivational morphology remains ill understood All eight articles have an empirical focus and rely on carefully collected sets of data At the same time the contributions represent a broad variety of approaches Several contributions deal with specific problems of the pairing of form and meaning such as the rivalry between nominalizing suffixes or the semantic categories encoded by conversion pairs Other articles tackle the more general question of how meaning is organized e g whether there is evidence for the paradigmatic organization of derived words or the reality of the inflection derivation dichotomy The contributions feature innovative methodologies such as representing lexical meaning as word distribution or predicting semantic properties by means of analogical algorithms This volume offers new and highly interesting insights into how complex words mean and offers directions for future research in an oft neglected field

Office for Subject Cataloging Policy, 2012 Phrasal Constructions and Resultativeness in English Marina Gorlach, 2004 Eat up the apple or Eat the apple up Is there any difference in the messages each of these alternative forms sends If there isn't why bother to keep both On the other hand is there any semantic similarity between eat the apple up and break the glass to pieces This study takes a fresh look at a still controversial issue of phrasal verbs and their alternate word order applying sign oriented theory and methodology Unlike other analyses it asserts that there is a semantic distinction between the two word order variants phrasal verbs may appear in In order to test this distinction the author analyzes a large corpus of data and also uses translation into a language having a clear morphological distinction between resultative non resultative forms Russian As follows from the analysis English has morphological and syntactic tools to express resultative meaning which allows suggesting a new lexico grammatical category resultativeness **Library of Congress Subject Headings** Library of Congress. Clark, 2019-05-20 No detailed description available for Semantics and Comprehension **A French-English Grammar** Morris Salkoff, 1999-09-15 In this contrastive French English grammar the comparisons between French structures and their

English equivalents are formulated as rules which associate a French schema of a particular grammatical structure with its translation into an equivalent English schema. The grammar contains all the rules giving the English equivalents under translation of the principal grammatical structures of French: the verb phrase, the noun phrase and the adjuncts/modifiers. In addition to its intrinsic linguistic interest, this comparative grammar has two important applications. The translation equivalences it contains can provide a firm foundation for the teaching of the techniques of translation. Furthermore, such a comparative grammar is a necessary preliminary to any program of machine translation which needs a set of formal rules like those given here for the French to English case for translating into a target language the syntactic structures encountered in the source language. *Universality of semantic frames and language specific Bulgarian data* Svetla

Koeva, 2025-06-20. The book *Universality of semantic frames and language specific Bulgarian data* is devoted to the principles of data organisation in the Bulgarian FrameNet which has been in development for more than 20 years and has gone through various phases. Originally it was developed as an independent resource but for about fifteen years it has been correlated with the Berkeley FrameNet observing the following basic principles. The information in the FrameNet that is relevant for the description of Bulgarian is considered language independent: e.g. definition of frames and relations between them, definitions of frames and elements and relations between them etc. and is automatically transferred into a structure called a superframe. For each superframe there may be one or more Bulgarian frames in which the language independent information is restructured if necessary so that it corresponds exactly to the description for the Bulgarian language. The Bulgarian verbs of communication, change, movement, contact and emotion are described in more detail; their subclasses are delineated and the similarities and differences in the semantic and syntactic description for Bulgarian and English are compared and discussed. It is shown how the semantic frames can be used in an experiment to assess children's mastery of semantic conceptualisation and syntactic use of verbs from their basic vocabulary. These and a number of other applications: automatic assignment of semantic roles, automatic recognition of events in news, automatic recognition of scenes in images and videos are some of the applications in which the Bulgarian FrameNet can be used. In addition, the semantic and syntactic information in the Bulgarian FrameNet can be used for theoretical considerations including comparative studies focussing on the modern state of the Bulgarian language and other languages for which a FrameNet has been developed. Jia-Fei Hong, Yangsen Zhang, Pengyuan Liu, 2020-01-03. This book constitutes the thoroughly refereed post-workshop proceedings of the 20th Chinese Lexical Semantics Workshop CLSW 2019 held in Chiayi, Taiwan, in June 2019. The 39 full papers and 46 short papers included in this volume were carefully reviewed and selected from 254 submissions. They are organized in the following topical sections: lexical semantics, applications of natural language processing, lexical resources, corpus linguistics.
