A Theory of International Trade Wei-Bin Zhang, 2012-12-06

Over more than two centuries the development of economic theory has created a wide array of different concepts theories and insights My recent book Capital and Knowledge Zhang 1999a shows how separate economic theories such as the Marxian economics the Keynesian economics the general equilibrium theory and the neoclassical growth theory can be examined within a single theoretical framework The Capital and Knowledge constructs an economic theory to account for the phenomena explained by the main economic theories of national economies in a unified manner It tries to draw together the disparate branches of economics into a single organized system of knowledge This book is a part of my economic theory with endogenous population capital knowledge preferences sexual division of labor and consumption institutions economic structures and exchange values over time and space Zhang 1996a As an extension of the Capital and Knowledge which is focused on the dynamics of national economies this book is to construct a theory of international trade We are concerned with dynamic relations between international division of labor division of consumption and determination of prices structure in global economy We examine dynamic interdependence between capital accumulation knowledge creation and utilization economic growth price structures and international trade patterns under free competition Our theory is constructed on the basis of a few concepts within a compact framework Studies in the Pure Theory of International Trade Raveendra N.

The Theory of International Trade Charles Francis Bastable, 1887

The Pure Theory of

International Trade Miltiades Chacholiades, There has long been a need for a systematic introduction to the modern pure theory of international trade that would take the student through a careful introduction to the tools of analysis and the main logical propositions into the application of the theory to practical problems of international economic policy Trade theory should be part and parcel of price theory distinguished only by the fact that other countries form part of the natural opportunities and natural constraints that a country confronts in its efforts to bend nature to its desire to produce utility yielding goods and services but its exposition is often confused by the attachment of its expositors to obsolete problems and backward analytical techniques This book covers in detail classical neoclassical and modern theories of international trade with special attention to problems of equilibrium growth and welfare and discusses the work of all major contributors in this field from Ricardo and Mill through Meade Heckscher and Ohlin to the growth models of Johnson Solow and Uzawa All problems are clearly stated and the easiest and most convenient solutions are sought in each case with the more technical topics in the field discussed in several chapters and appendixes that may be omitted for less advanced students without interrupting the continuity of the book The book's coverage is complete and entirely up to date It is written primarily for

advanced undergraduate and graduate courses in international trade but it will also serve as an important reference tool for professional economists working in this field and will be of considerable interest to students and practitioners dealing with problems of economic development and international business relationships more generally Miltiades Chacholiades studied at the Athens School of Economics and Business Science in Athens Greece and received his doctorate from the Massachusetts Institute of Technology He has taught at New York University and the University of California in Los Angeles and is presently Professor of Economics at Georgia State University His articles have been published in a number of international professional economic journals Theory of International Trade Avinash K. Dixit, Victor Norman, 1980-09-30 This book emphasizes that a trading equilibrium is general rather than partial and is often best modeled using dual or envelope functions Theory of International Trade Avinash Dixit, Victor Norman, 1980-09-30 This book expounds trade theory emphasizing that a trading equilibrium is general rather than partial and is often best modelled using dual or envelope functions This yields a compact treatment of standard theory clarifies some errors and confusions and produces some new departures In particular the book i gives unified treatments of comparative statics and welfare ii sheds new light on the factor price equalization issue iii treats the modern specific factor model in parallel with the usual Heckscher Ohlin one iv analyses the balance of payments in general equilibrium with flexible and fixed prices v studies imperfect competition and intra industry trade
