Studies In The Philosophy Of Logic And Knowledge:

Studies in the Philosophy of Logic and Knowledge Timothy John Smiley, Thomas Baldwin, 2004 Questions about knowledge and about the relation between logic and language are at the heart of philosophy Eleven distinguished philosophers from Britain and America contribute papers on such questions All the contributions are examples of recent philosophy at its best The first half of the book constitutes a running debate about knowledge evidence and doubt The second half tackles questions about logic and its relation to language [Logic and Knowledge](#) Bertrand Russell, 1988 No online description is currently available If you would like to receive information about this title please email Routledge at info@routledge.com

Theoretical Knowledge Viacheslav Semenovich Stepin, 2005-07-12 He shows direct and inverse links between foundations of science and new theories and empirical facts evolved from those how among many potentially possible histories of science a culture selects just those directions which become a real history of science The author analyses mechanisms of the generation of scientific theories and shows that those are changed in the process of historical development of science He displays three historical types of scientific rationality classical non classical and post non classical which appears in modern science and shows features of their coexistence and interplay It is shown that along with the emerging of post non classical rationality science increases the sphere of its worldview applications Science begins to correlate not only with the basic values of technogenic civilization but also with some values and patterns of traditional cultures

[The Theory of Info-Statics: Conceptual Foundations of Information and Knowledge](#) Kofi K. Dompere, 2017-07-06 This book discusses the development of a theory of info statics as a sub theory of the general theory of information It describes the factors required to establish a definition of the concept of information that fixes the applicable boundaries of the phenomenon of information its linguistic structure and scientific applications The book establishes the definitional foundations of information and how the concepts of uncertainty data fact evidence and evidential things are sequential derivatives of information as the primary category which is a property of matter and energy The sub definitions are extended to include the concepts of possibility probability expectation anticipation surprise discounting forecasting prediction and the nature of past present future information structures It shows that the factors required to define the concept of information are those that allow differences and similarities to be established among universal objects over the ontological and epistemological spaces in terms of varieties and identities These factors are characteristic and signal dispositions on the basis of which general definitional foundations are developed to construct the general information definition GID The book then demonstrates that this definition is applicable to all types of information over the ontological and epistemological spaces It also defines the concepts of uncertainty data fact evidence and knowledge based on the GID Lastly it uses set theoretic analytics to enhance the definitional foundations and shows the value of the theory of info statics to establish varieties and categorial varieties at every point of time and thus initializes the construct of the theory of info dynamics *The Theory of*

Info-Dynamics: Rational Foundations of Information-Knowledge Dynamics Kofi K. Dompere, 2017-12-06 This book focuses on the development of a theory of info dynamics to support the theory of info statics in the general theory of information. It establishes the rational foundations of information dynamics and how these foundations relate to the general socio natural dynamics from the primary to the derived categories in the universal existence and from the potential to the actual in the ontological space. It also shows how these foundations relate to the general socio natural dynamics from the potential to the possible to give rise to the possibility space with possibilistic thinking from the possible to the probable to give rise to possibility space with probabilistic thinking and from the probable to the actual to give rise to the space of knowledge with paradigms of thought in the epistemological space. The theory is developed to explain the general dynamics through various transformations in quality quantity space in relation to the nature of information flows at each variety transformation. The theory explains the past present future connectivity of the evolving information structure in a manner that illuminates the transformation problem and its solution in the never ending information production within matter energy space under socio natural technologies to connect the theory of info statics which in turn presents explanations to the transformation problem and its solution. The theoretical framework is developed with analytical tools based on the principle of opposites systems of actual potential polarities negative positive dualities under different time structures with the use of category theory fuzzy paradigm of thought and game theory in the fuzzy stochastic cost benefit space. The rational foundations are enhanced with categorial analytics. The value of the theory of info dynamics is demonstrated in the explanatory and prescriptive structures of the transformations of varieties and categorial varieties at each point of time and over time from parent offspring sequences. It constitutes a general explanation of dynamics of information knowledge production through info processes and info processors induced by a socio natural infinite set of technologies in the construction destruction space.

Foundations of the Logical Theory of Scientific Knowledge (Complex Logic) A.A. Zinov'ev, 1973-03-31 Boston Studies in the Philosophy of Science are devoted to symposia congresses colloquia monographs and collected papers on the philosophical foundations of the sciences. It is now our pleasure to include A. A. Zinov'ev's treatise on complex logic among these volumes. Zinov'ev is one of the most creative of modern Soviet logicians and at the same time an innovative worker on the methodological foundations of science. More over Zinov'ev although still a developing scholar has exerted a substantial and stimulating influence upon his colleagues and students in Moscow and within other philosophical and logical circles of the Soviet Union. Hence it may be helpful in bringing this present work to an English reading audience to review briefly some contemporary Soviet investigations into scientific methodology. During the 1950's a vigorous new research program in logic was undertaken and the initial published work characteristic of most Soviet publications in the logic and methodology of the sciences was a collection of essays *Logical Investigations* Moscow 1959. Among the authors in addition to Zinov'ev himself were the philosophers A. Kolman and P. V. Tavanec and the mathematicians and linguists S. A. Janovskaja, A. S. Esenin Volpin, S. K.

Saumjan G N Povarov The Growth of Mathematical Knowledge Emily Grosholz, Herbert Breger, 2013-04-17 Mathematics has stood as a bridge between the Humanities and the Sciences since the days of classical antiquity For Plato mathematics was evidence of Being in the midst of Becoming garden variety evidence apparent even to small children and the unphilosophical and therefore of the highest educational significance In the great central similes of The Republic it is the touchstone of intelligibility for discourse and in the Timaeus it provides in an oddly literal sense the framework of nature insuring the intelligibility of the material world For Descartes mathematical ideas had a clarity and distinctness akin to the idea of God as the fifth of the Meditations makes especially clear Cartesian mathematical constructions as well as objects envisioned by the soul in the Principles the work of the physicist who provides a quantified account of the machines of nature hovers between description and constitution For Kant mathematics reveals the possibility of universal and necessary knowledge that is neither the logical unpacking of concepts nor the record of perceptual experience In the Critique of Pure Reason mathematics is one of the transcendental instruments the human mind uses to apprehend nature and by apprehending to construct it under the universal and necessary laws of Newtonian mechanics The Theory of the Knowledge Square: The Fuzzy Rational Foundations of the Knowledge-Production Systems Kofi Kissi Dompere, 2012-08-28 The monograph is about a meta theory of knowledge production process and the logical pathway that connects the epistemic possibility to the epistemic reality It examines the general conditions of paradigms for information processing and isolates the classical and fuzzy paradigms for comparative analysis The sets of conditions that give rise to them are defined stated and analyzed to abstract the corresponding sets of laws of thought The fuzzy paradigm with its corresponding logic and mathematics is related to inexact symbolism for the defective information structure where the results of the knowledge production must satisfy the epistemic conditionality composed of fuzzy conditionality and fuzzy stochastic conditionality under the principle of logical duality with continuum The classical paradigm with its corresponding logic and mathematics is related to exact symbolism for exact information structure where the vagueness component of the defectiveness is assumed away and where the results of the knowledge production must satisfy no epistemic conditionality or at the maximum only the stochastic conditionality under the principle of logical dualism with excluded middle It is argued that the epistemic path that links ontological space to the epistemological space is information The ontological space is taken as the primary category of reality while the epistemological space is shown to be a derivative Such information is universally defective and together with assumptions imposed guides the development of paradigms with their laws of thought logic of reasoning mathematics and computational techniques The relational structure is seen in terms of logical trinity with a given example as matter information energy transformational trinity which is supported by the time trinity of past present future relationality The book is written for professionals researchers and students working in philosophy of science decision choice theories economies sciences computer science engineering cognitive psychology and researchers working on or interested in fuzzy

paradigm fuzzy logic fuzzy decisions and phenomena of vagueness and ambiguities fuzzy mathematics fuzzy stochastic processes and theory of knowledge It is further aimed at research institutions and libraries The subject matter belongs to extensive research and development taking place on fuzzy phenomena and the debate between the fuzzy paradigm and the classical paradigm relative to informatics synergetic science and complexity theory The book will have a global appeal and across disciplines Its strength besides the contents is the special effort that is undertaken to make it relevant and accessible to different areas of sciences and knowledge production

Jaakko Hintikka on Knowledge and Game-Theoretical Semantics Hans van Ditmarsch, Gabriel Sandu, 2018-01-31 This book focuses on the game theoretical semantics and epistemic logic of Jaakko Hintikka Hintikka was a prodigious and esteemed philosopher and logician and his death in August 2015 was a huge loss to the philosophical community This book whose chapters have been in preparation for several years is dedicated to the work of Jaako Hintikka and to his memory This edited volume consists of 23 contributions from leading logicians and philosophers who discuss themes that span across the entire range of Hintikka's career Semantic Representationalism Logical Dialogues Knowledge and Epistemic logic are among some of the topics covered in this book's chapters The book should appeal to students scholars and teachers who wish to explore the philosophy of Jaako Hintikka

The Lvov-Warsaw School, 2016-08-01 The influence of Kazimierz Twardowski on modern philosophy in Poland is all pervasive Twardowski instilled in his students a passion for clarity and seriousness He taught them to regard philosophy as a collaborative effort a matter of disciplined discussion and argument and he encouraged them to train themselves thoroughly in at least one extra philosophical discipline and to work together with scientists from other fields both inside Poland and internationally This led above all to collaborations with mathematicians so that the Lvov school of philosophy would gradually evolve into the Warsaw school of logic Twardowski taught his students too to respect and to pursue serious research in the history of philosophy an aspect of the tradition of philosophy on Polish territory which is illustrated in such disparate works as Jan ukasiewicz's ground breaking monograph on the law of non contradiction in Aristotle and W adys aw Tatarkiewicz's highly influential multi volume histories of philosophy and aesthetics The term Polish philosophy is a misnomer for Polish philosophy is philosophy per se it is part and parcel of the mainstream of world philosophy simply because it meets international standards of training rigour professionalism and specialization Barry Smith from Why Polish Philosophy does Not Exist
