Sulphur Dioxide and Nitrogen Oxides in Industrial Waste Gases Daniel van Velzen, 2012-12-06 D VAN VELZEN
Commission of the European Communities Joint Research Centre Ispra Environment Institute 1 21020 Ispra Varese ITAL Y 1
Introduction Worldwide there is an ever increasing interest and concern about the destructive effects of air pollution on man's ecosystem. The growing awareness of these effects has revealed the need to take adequate measures to minimize the emission of air polluting products. The two most important contaminants occurring in the largest concentrations and quantities are sulphur dioxide and nitrogen oxides. Both pollutants are formed mainly during the combustion of fossil fuels, particularly by power stations and traffic. The effects of air pollution caused by these two contaminants have already been studied for several decades and measures to protect the environment against their adverse effects are now operative in many countries. The present volume contains the proceedings of a Eurocourse held in Ispra in September 1990. The course was meant to give an overview of present knowledge concerning the emission sources and quantities to cover features of present legislation and to give a survey of the most important modern abatement techniques for SO₂ and NO_x. It was mainly addressed to higher and medium management in the power, chemical and similar industries, particularly from those countries where the fight against air pollution is still in its infancy. Obviously it was not possible to cover completely the whole range of subjects during the limited duration of a Eurocourse.

Acid Precipitation, 1985 **Flue Gas Desulfurization and Industrial Minerals** M. Michael Miller, Deborah A. Kramer, G. Oliver Vagt, 1993. Contains 4101 references on FGD. Flue Gas Desulfurization primarily from 1982 through June 1993. Complements the Flue Gas Desulfurization and Denitrification bibliography published by the U.S. Dept of Energy in Jan 1985. References were located on the Energy Science and Technology Pollution Abstracts and Environmental Bibliography databases. Primarily covers FGD and the use of industrial minerals in the desulfurization process or in by-product utilization and disposal. Emphasizes post-combustion removal of sulfur dioxide through processes such as in-duct injection and wet and dry scrubbing.

Energy and Sustainability II A. Mammoli, C. A. Brebbia, 2009-06-08. The way in which our society exists, operates and develops is strongly influenced by the way in which energy is produced and consumed. No process in Industry can be performed without sufficient supply of energy and without Industry there can be no production of commodities on which the existence of modern Society depends. The energy systems evolved over a long period and more rapidly over the last two centuries as a response to the requirements of Industry and Society, starting from combustion of fuels to exploiting nuclear energy and renewable resources. It is clear that the evolution of the energy systems is a continuous process which involves constant technological development and innovation. The presentation on the Second International Conference includes Renewable Energy Technologies, Energy Management, Energy Policies, Energy and the Environment, Energy Analysis, Energy Efficiency, Energy Storage and Management.

Interfacial Applications in Environmental Engineering Mark A. Keane, 2002-11-13 Describing novel methods and catalytic strategies to conserve and maintain air water and soil quality researchers from a range of disciplines discuss the role of interface science in environmental remediation They detail approaches to separate reuse recover and treat potentially valuable materials using techniques in ion exchange and adsorption develop and design new catalysts to enhance production energy and cost efficiency and evaluate and improve existing treatment strategies for recycling of plastics and wastes The 17 studies were developed from presentations at the symposium Application of Interface Science to Environmental Pollution Control Chicago August 2001

The Modern Problems of Electrostatics with Applications in Environment Protection Ion I. Inculet, Florin Teodor Tanasescu, Radu Cramariuc, 2012-12-06 Among the many technological and legal efforts being made to restore our environment electrostatic technologies may well hold the solution to the cleaning of air water and soil Such technologies include non thermal plasma

processing electron beam irradiation electrical discharge hybrid plasma systems The book also contains descriptions of the industrial implementation of the technology for NO_x and SO₂ removal using accelerated electrons This technique has been implemented in three plants built in China Poland and Japan Water pollution can be controlled and reduced by the use of ozone and UV irradiation Soil pollution can be reduced by electrical methods and by using electrostatics to spray agricultural pesticides Further articles cover the future of EHD systems in environmental protection new aspects of ESD research and industrial waste recycling technologies

Restoration of Forests R.M. Gutkowski, Tomasz Winnicki, 2012-12-06 In the conflict between logging as a material resource and preservation the forests are becoming depleted throughout the world and this depletion is aggravated by the effects of air pollution The concept of utilization is thus now being expanded to include vital societal values These issues are nowhere more acute than in Central and Eastern Europe where obsolete poorly maintained industrial plant is common Air pollutant levels are so high that one area has been called the Black Triangle Timber is required in this region as a building material and logging for fuelwood is practised giving rise to a complex linkage between industry energy supply deforestation agriculture value added forestry products and economic development This book presents current information on national and regional issues relating to environmental threats to forest land focusing on ecology environment and science forest ownership and management forest product utilization government and public agency roles The recommendations action items and the human network needed for regional level implementation are detailed in situation position and state of the art papers The final objective is to develop a plan of action to help abate the negative impacts while sustaining or expanding the forests the economy and the energy sufficiency of the region

Environmental Impact Assessment A.G. Colombo, 2012-12-06 The Joint Research Centre of the European Communities and in particular the Institute for Systems Engineering and Informatics ISEI at Ispra have well established competences in risk analysis uncertainty analysis and statistical data treatment More recently work on Environmental Impact Assessment EIA particularly on environmental indicators and indices and on a system engineering approach to EIA has started This approach attempts to move towards unified procedures to investigate normal operation and accidental risks these are problems concerned within both the EIA Directive 85/337/EEC and the Seveso Directive 82/501/EEC In May 1990 a Workshop on Indicators and Indices for Environmental Impact Assessment and Risk Analysis was organized at the JRC Ispra The Proceedings of this Workshop Report EUR 13060 EN 1990 are a reference document in the field This book is based on the papers presented at the Eurocourse EIA/91 held at the JRC Ispra in the Autumn of 1991 This was the first course on Environmental Impact Assessment given in the JRC's Eurocourse series at Ispra It was a success because of both the high calibre of the lecturers and the well informed and numerous participants The work focuses on the broader aspects of EIA namely legislation indicators and indices approaches and techniques economic and sociological implications

Air Pollution and Greenhouse Gases Zhongchao Tan, 2014-11-03 This textbook discusses engineering principles relating to air pollution and greenhouse

gases GHGs it focuses on engineering principles and designs of related devices and equipment for air emission control for a variety of industries such as energy chemical and transportation industries The book aims primarily at senior undergraduate and graduate students in mechanical chemical and or environmental engineering departments it can also be used as a reference book by technical staff and design engineers who are interested in and need to have technical knowledge in air pollution and GHGs The book is motivated by recent rapid advances in air pollution and greenhouse gas emissions and their control technologies In addition to classic topics related to air pollution this book is also featured with emerging topics related to air pollution and GHGs It covers recent advances in engineering approaches to the reduction of GHG emissions including but are not limited to green energy technologies and carbon sequestration and storage It also introduces an emerging topic in air pollution which is referred to as Nano Air Pollution It is a growing concern in air pollution but largely missing in similar books likely because of recent rapid advances in nanotechnology has outpaced the advances in nano air pollution control
