and Cities Huw Heywood, 2019-07-25 People across the world are becoming more aware of the need for the buildings and cities they live and work in to be sustainable but the issue of how to be sustainable can seem a confusing and complex one These rules of thumb provide universal guidelines for the sustainable design of both buildings and the urban realm It s a global primer and textbook for anyone interested in understanding sustainability in the built environment an ideal starting point for students as well as an aide memoir for more experienced readers and practitioners interested in this field

Elements of Sustainable Architecture Rosa Urbano Gutiérrez, Laura de la Plaza Hidalgo, 2019-12-06 For sustainable architecture to become a reality the way we design buildings needs to change Many architects are concerned that sustainable technologies may interfere with a building s aesthetic appearance and so these are often added on once the design process is complete Elements of Sustainable Architecture solves this dilemma by helping students to develop the design skills they need to create sustainable buildings ensuring that ecological considerations are applied throughout the design process Restoring the primacy of aesthetics and creativity to sustainable design the book focuses on strategies that have the greatest impact on building design It also shows the influence of sustainability considerations on choices about aspects such as composition form space tectonics materials colour textures proportion and position Specifically designed to offer a new way of understanding architecture the book introduces students to the basic principles and methods of sustainable design features current examples and inspiring case studies to support learning step by step presents

information in a visually appealing intuitive easy to understand way includes over 500 high quality colour diagrams drawings sketches and photographs A clear visual introduction to creating aesthetically beautiful and sustainable buildings this is essential reading for students in sustainable architecture courses

Building in Hot and Humid Regions Napoleon Enteria, Hazim Awbi, Mat Santamouris, 2019-04-26 This book presents an in depth analysis covering climatic and weather conditions house and building development history construction methods and technologies and environmental conditions It provides relevant house and building information and highlights recent advances in hot and humid regions as well as developments in other regions that are relevant to hot and humid climates The countries in hot and humid regions which include the tropical countries the Middle Eastern countries around the Mediterranean and many countries of Central Asia and Africa are home to some of the most challenging conditions in the world in terms of house and building design and construction and in terms of maintaining indoor thermal comfort and air quality in an energy efficient way The book's respective chapters prepared by expert contributors cover essential concepts designs and construction methodologies for houses and commercial buildings As such the book offers a valuable resource for undergraduate and graduate students in architecture and engineering house and building designers and building sciences researchers Building contractors manufacturers and distributors of building equipment and devices and government policymakers and legislators will also benefit from the information provided in this book

Sustainable Approaches in Architecture and Urban Design Gökhan UŞMA, 2024-12-22 *Design and Construction of Bioclimatic Wooden Greenhouses, Volume 1* Gian Luca Brunetti, 2022-12-20 This book is the first of four dealing with bioclimatic design and construction by focusing on the most basic and polyvalent of modern environmental systems the bioclimatic greenhouse the Swiss army chainsaw of architecture More specifically this first volume focuses on preliminary bioclimatic design of greenhouses laying down fundamental principles that are also likely to be invaluable in designing in more general terms bioclimatic and low energy architecture with low environmental impact This multi volume book covers both free standing greenhouses that can naturally heat and cool themselves and lean to greenhouses that support the natural heating and cooling of buildings this includes both agricultural greenhouses and greenhouses suited to host people As a result it is a trans disciplinary work deriving its areas of concern from a broad range of study areas spanning from environmental to constructional to structural drawing the clarity of the approach from the fact that the topics are presented by a single author with a single voice and a designer's mindset To achieve this the book adopts a composite set of explanatory strategies and communication registers including extensive support by 3D construction drawings and examples and presents not only state of the art solutions but also experimental ones

BIM in Small-Scale Sustainable Design François Lévy, 2011-11-16 Any architect doing small or medium scaled projects who is also vested in sustainable design but is not yet doing BIM will enjoy this book's overall focus Architosh.com This work is the leading guide to architectural design within a building information modeling BIM workflow giving the

practitioner a clear procedure when designing climate load dominated buildings The book incorporates new information related to BIM integrated practice and sustainable design as well information on how designers can incorporate the latest technological tools Each chapter addresses specific topics such as natural ventilation for cooling passive solar heating rainwater harvesting and building hydrology optimizing material use and reducing construction waste and collaborating with consultants or other building professionals such as engineers and energy modelers Routledge Handbook of Resilient Thermal Comfort Fergus Nicol, Hom Bahadur Rijal, Susan Roaf, 2022-04-19 This book brings together some of the finest academics in the field to address important questions around the way in which people experience their physical environments including temperature light air quality acoustics and so forth It is of importance not only to the comfort people feel indoors but also the success of any building as an environment for its stated purpose The way in which comfort is produced and perceived has a profound effect on the energy use of a building and its resilience to the increasing dangers posed by extreme weather events and power outages caused by climate change Research on thermal comfort is particularly important not only for the health and well being of occupants but because energy used for temperature control is responsible for a large part of the total energy budget of the built environment In recent years there has been an increasing focus on the vulnerabilities of the thermal comfort system how and why are buildings failing to provide safe and agreeable thermal environments at an affordable price Achieving comfort in buildings is a complex subject that involves physics behaviour physiology energy conservation climate change and of course architecture and urban design Bringing together the related disciplines in one volume lays strong multi disciplinary foundations for new research and design directions for resilient 21st century architecture This book heralds workable solutions and emerging directions for key fields in building the resilience of households organisations and populations in a heating world **Materials for Architects and Builders** Arthur Lyons, 2019-08-28 Materials for Architects and Builders provides a clear and concise introduction to the broad range of materials used within the construction industry and covers the essential details of their manufacture key physical properties specification and uses Understanding the basics of materials is a crucial part of undergraduate and diploma construction or architecture related courses and this established textbook helps the reader to do just that with the help of colour photographs and clear diagrams throughout This new sixth edition has been completely revised and updated to include the latest developments in materials research new images appropriate technologies and relevant legislation The ecological effects of building construction and lifetime use remain an important focus and this new edition includes a wide range of energy saving building components ICACE 2019 Mokhtar Awang, Meor Razali Meor M Fared, 2020-02-27 This book presents selected articles from the 3rd International Conference on Architecture and Civil Engineering 2019 held in Kuala Lumpur Malaysia Written by leading researchers and industry professionals the papers highlight recent advances and addresses current issues in the fields of civil engineering and architecture **Subnature** David Gissen, 2012-03-20 We are

conditioned over time to regard environmental forces such as dust mud gas smoke debris weeds and insects as inimical to architecture Much of today s discussion about sustainable and green design revolves around efforts to clean or filter out these primitive elements While mostly the direct result of human habitation these subnatural forces are nothing new In fact our ability to manage these forces has long defined the limits of civilized life From its origins architecture has been engaged in both fighting and embracing these so called destructive forces In *Subnature* David Gissen author of our critically acclaimed *Big and Green* examines experimental work by today s leading designers scholars philosophers and biologists that rejects the idea that humans can somehow recreate a purely natural world free of the untidy elements that actually constitute nature Each chapter provides an examination of a particular form of subnature and its actualization in contemporary design practice The exhilarating and at times unsettling work featured in *Subnature* suggests an alternative view of natural processes and ecosystems and their relationships to human society and architecture R Sie n s Mosquito Bottleneck house in Trinidad uses a skin that actually attracts mosquitoes and moves them through the building while keeping them separate from the occupants In his building designs the architect Philippe Rahm draws the dank air from the earth and the gasses and moisture from our breath to define new forms of spatial experience In his *Underground House* Mollier House and *Omnisport Hall* Rahm forces us to consider the odor of soil and the emissions from our body as the natural context of a future architecture Cero 9 s design for the Magic Mountain captures excess heat emitted from a power generator in Ames Iowa to fuel a rose garden that embellishes the industrial site and creates a natural mountain rising above the city s skyline *Subnature* looks beyond LEED ratings green roofs and solar panels toward a progressive architecture based on a radical new conception of nature

Understanding Architecture Leland M.
