Martin, 1997-12-19 This book is a text for junior senior or first year graduate courses traditionally titled Foundations of Geometry and or Non Euclidean Geometry The first 29 chapters are for a semester or year course on the foundations of geometry The remaining chapters may then be used for either a regular course or independent study courses Another possibility which is also especially suited for in service teachers of high school geometry is to survey the fundamentals of absolute geometry Chapters 1-20 very quickly and begin earnest study with the theory of parallels and isometries Chapters 21-30 The text is self contained except that the elementary calculus is assumed for some parts of the material on advanced hyperbolic geometry Chapters 31-34 There are over 650 exercises 30 of which are 10 part true or false questions A rigorous ruler and protractor axiomatic development of the Euclidean and hyperbolic planes including the classification of the isometries of these planes is balanced by the discussion about this development Models such as Taxicab Geometry are used extensively to illustrate theory Historical aspects and alternatives to the selected axioms are prominent The classical axiom systems of Euclid and Hilbert are discussed as are axiom systems for three and four dimensional absolute geometry and Pieri's system based on rigid motions The text is divided into three parts The Introduction Chapters 1-4 is to be read as quickly as possible and then used for reference if necessary **The Foundations of Mathematics** Paul Carus, 1908 **The Foundations of Geometry** David Hilbert, 2014-03 This Is A New Release Of The Original 1902 Edition
