*Official Gazette of the United States Patent and Trademark Office* ,2002      **Computer Architecture** Joseph D. Dumas II, 2018-10-03 Future computing professionals must become familiar with historical computer architectures because many of the same or similar techniques are still being used and may persist well into the future Computer Architecture Fundamentals and Principles of Computer Design discusses the fundamental principles of computer design and performance enhancement that have proven effective and demonstrates how current trends in architecture and implementation rely on these principles while expanding upon them or applying them in new ways Rather than focusing on a particular type of machine this textbook explains concepts and techniques via examples drawn from various architectures and implementations When necessary the author creates simplified examples that clearly explain architectural and implementation features used across many computing platforms Following an introduction that discusses the difference between architecture and implementation and

how they relate the next four chapters cover the architecture of traditional single processor systems that are still after 60 years the most widely used computing machines The final two chapters explore approaches to adopt when single processor systems do not reach desired levels of performance or are not suited for intended applications Topics include parallel systems major classifications of architectures and characteristics of unconventional systems of the past present and future This textbook provides students with a thorough grounding in what constitutes high performance and how to measure it as well as a full familiarity in the fundamentals needed to make systems perform better This knowledge enables them to understand and evaluate the many new systems they will encounter throughout their professional careers

*Mobile Networks* Jesús Hamilton Ortiz, 2012-05-09 The growth in the use of mobile networks has come mainly with the third generation systems and voice traffic With the current third generation and the arrival of the 4G the number of mobile users in the world will exceed the number of landlines users Audio and video streaming have had a significant increase parallel to the requirements of bandwidth and quality of service demanded by those applications Mobile networks require that the applications and protocols that have worked successfully in fixed networks can be used with the same level of quality in mobile scenarios Until the third generation of mobile networks the need to ensure reliable handovers was still an important issue On the eve of a new generation of access networks 4G and increased connectivity between networks of different characteristics commonly called hybrid satellite ad hoc sensors wired WIMAX LAN etc it is necessary to transfer mechanisms of mobility to future generations of networks In order to achieve this it is essential to carry out a comprehensive evaluation of the performance of current protocols and the diverse topologies to suit the new mobility conditions
