The Future Of Academic Medical Centers:

The Future of Academic Medical Centers Henry Aaron, 2004-05-13 Academic medical centers provide cutting edge acute care train tomorrow's physicians and carry out research that will expand the range of treatable and curable illnesses. But these centers themselves may need urgent care experts generally agree that many are suffering acute even life threatening financial distress. Many academic medical centers are suffering for several reasons: inpatient admissions are down as many procedures that once required a hospital stay are now performed on an outpatient basis or in a physician's office; managed care plans have negotiated discounted fees that cut hospital operating margins; the Balanced Budget Act of 1997 curtailed Medicare reimbursements; lowered margins and pushed some into the red; the revolution in information technology is imposing large new capital costs and the character of medical education is receiving its most thorough review in decades. While there is a general consensus that medical centers are under pressure, experts disagree about the depth and pervasiveness of the current financial distress. Are they whining about financial pressures other less favored sectors find routine or is the high quality American teaching hospital becoming an endangered species that could face extinction if nothing is done? Because academic medical centers perform such important jobs it is critical to determine the true nature and depth of their current financial problems and then fashion analytically sound and politically sustainable solutions. This book brings together chief executive officers of major medical centers, university presidents, senior members of Congressional and executive office staffs and leading analysts. These experts address the key issues and prescribe remedies both regulatory and legislative to ensure that the teaching hospital remains a picture of financial health. Contributors include Nancy Kane, Harvard School of Public Health; Jamie Reuter, Institute for Health Care Research P.

The Future of Academic Medical Centers Henry J. Aaron, 2001 Academic medical centers provide a wide range of crucial services but many are currently suffering severe financial crises. Henry J. Aaron and a group of distinguished experts address the key issues and prescribe remedies both regulatory and legislative to ensure that the teaching hospital remains a picture of financial health.

American Medical Schools and the Practice of Medicine William G. Rothstein, 1987-10-29. In this extensively researched history of medical schools, William Rothstein, a leading historian of American medicine, traces the formation of the medical school from its origin as a source of medical lectures to its current status as a center of undergraduate and graduate medical education, biomedical research and specialized patient care. Using a variety of historical and sociological techniques, Rothstein accurately describes methods of medical education from one generation of doctors to the next, illustrating the changing career paths in medicine. At the same time, this study considers medical schools within the context of the state of medical practice, institutions of medical care and general higher education. The most complete and thorough general history of medical education in the United States ever written, this work focuses both on the historical development of medical schools and their current status.

Cumulated Index Medicus, 1989. U.S. Healthcare and the Future Supply of Physicians Panos Minogiannis, 2019-01-25. Many different sectors of modern society influence the nation's healthcare system. Government, health insurance companies, managed care organizations, academic health centers, the pharmaceutical industry and other groups all affect healthcare. In the areas of medical access, cost and quality, the physician remains the key to the efficiency and effectiveness of healthcare services. Eli Ginzberg and Panos Minogiannis, in Ginzberg's final book, examine the supply of health personnel in the United States. They consider the ways it has been influenced by federal and state legislation, healthcare financing, the transformation of the hospital, managed care and health trends in the last part of the twentieth century. Through this historical approach, the book identifies key moments in U.S. health policy history that have led to problems in the geographical distribution of medical personnel, gender and race representation in the health personnel pool and subsequent attempts to resolve these problems. This volume pays special attention to current

trends in healthcare and tries to forecast the direction of the debate over health personnel supply in the coming years Chronic care conditions and the ageing of the population on the one hand and the penetration of managed care and the subsequent transformation of American hospitals on the other converge to present policymakers with tremendous challenges in financing healthcare Ginzberg and Minogiannis argue that a more balanced production and distribution of U S health personnel will go far in easing the financial burden of healthcare and at the same time improve the quality of services provided to the American people

The Future of Health-Care Delivery Stephen C. Schimpff, MD,2012-02-01

Approximately 100 000 deaths per year in the United States result from preventable medical errors This figure is about twice the number of people who die in car accidents and five times the number of murder victims annually and twenty times the number of servicemen and women killed in Iraq and Afghanistan since the start of hostilities in 2001 If you think Americans have the best health care system in the world think again In this deeply researched and controversial book Dr Stephen Schimpff explains why our health care delivery system serves us so poorly why it costs so much and why government policy over many decades has not only failed to improve care delivery but has actually made it worse In the process he dispels common misconceptions about medicine and health care The Future of Health Care Delivery provides timely information and a road map to achieve world class care delivery putting health care where it belongs in the hands of the patient and medical professionals instead of the insurance companies and government
