[A Computational Model of Natural Language Communication](#) Roland R. Hausser,2006-09-28 Everyday life would be easier if we could simply talk with machines instead of having to program them Before such talking robots can be built however there must be a theory of how communicating with natural language works This requires not only a grammatical analysis of the language signs but also a model of the cognitive agent with interfaces for recognition and action an internal database and an algorithm for reading content in and out In Database Semantics these ingredients are used for reconstructing natural language communication as a mechanism for transferring content from the database of the speaker to the database of the hearer Part I

of this book presents a high level description of an artificial agent which humans can freely communicate with in their accustomed language Part II analyzes the major constructions of natural language i e intra and extrapositional functor argument structure coordination and coreference in the speaker and the hearer mode Part III defines declarative specifications for fragments of English which are used for an implementation in Java The book provides researchers graduate students and software engineers with a functional framework for the theoretical analysis of natural language communication and for all practical applications of natural language processing

Understanding Society and Natural Resources Michael J. Manfredo, Jerry J. Vaske, Andreas Rechkemmer, Esther A. Duke, 2014-06-11 In this edited open access book leading scholars from different disciplinary backgrounds wrestle with social science integration opportunities and challenges This book explores the growing concern of how best to achieve effective integration of the social science disciplines as a means for furthering natural resource social science and environmental problem solving The chapters provide an overview of the history vision advances examples and methods that could lead to integration The quest for integration among the social sciences is not new Some argue that the social sciences have lagged in their advancements and contributions to society due to their inability to address integration related issues Integration merits debate for a number of reasons First natural resource issues are complex and are affected by multiple proximate driving social factors Single disciplinary studies focused at one level are unlikely to provide explanations that represent this complexity and are limited in their ability to inform policy recommendations Complex problems are best explored across disciplines that examine social ecological phenomenon from different scales Second multi disciplinary initiatives such as those with physical and biological scientists are necessary to understand the scope of the social sciences Too frequently there is a belief that one social scientist on a multi disciplinary team provides adequate social science representation Third more complete models of human behavior will be achieved through a synthesis of diverse social science perspectives

Mercado, Fernando Casanoves, Graciela Mónica Rusch, Mark Van Wijk, Jacques Avelino, 2025-05-13 The intricate interplay between the gastrointestinal microbiota and the host organism has profound implications for both animal health and performance In recent years there has been a growing interest in exploring the potential of natural plant extracts and probiotics to modulate this symbiotic relationship The gut microbiome plays a pivotal role in nutrient absorption immune

system development and overall health of animals making it a critical factor in animal husbandry and veterinary medicine. The utilization of natural plant extracts and probiotics offers a promising avenue for enhancing animal growth performance and bolstering disease resistance. These bioactive compounds have been shown to influence the composition and function of the gut microbiota, thereby affecting nutrient utilization, immune responses, and the overall well-being of the host organism. Research in this field has witnessed significant advancements, but there is still much to be explored and understood. The goal of this Research Topic is to shed light on the recent advances in the field of utilizing natural plant extracts and probiotics to modulate host-gut microbiome interactions in animals. We seek to address the challenges, opportunities, and the potential application of these interventions to enhance animal growth and health.
