Lesson Study as Pedagogic Transfer Kanako N. Kusanagi,2022-11-01 This book examines education transfer specifically focusing on pedagogic transfer and analyzes what happens when lesson study is introduced into foreign contextual settings Lesson study a professional development approach that originated in Japan 150 years ago has been widely considered one of the best practices for collaborative professional development There is an underlying assumption behind education transfer that when best practice is transferred to another country it will generate a similar effect and improve schooling quality Since pedagogic practice is socially constructed the best practice in one setting may not be meaningful in another contextual setting This book makes a unique contribution to the field of comparative education by offering a sociological examination of why pedagogic transfer often fails to bring expected benefits It is comprised of three parts Part I Pedagogic Transfer and Lesson study provides contextualized analysis of lesson study in Japan and abroad and presents how the meaning of practice is always reinterpreted against the local educational context Part II presents a sociological analysis of Indonesian teachers practice based on ethnographic fieldwork It conceptually analyses the nature of the teacher community and their practice and is presented as teacher strategies The concept showed that teacher culture and practice are not fixed but constantly negotiated within the institutional setting Part III Sociological Understanding of Pedagogic Transfer builds on the analyses in Part I and II and provides a theoretical understanding of the issue of pedagogic transfer Professional responsibilities of teachers collegiality and teaching expertise in Japan and Indonesia are compared to understand how the meaning of lesson study was reconstructed in the Indonesian setting In conclusion recommendations for an alternative approach to professional development are offered

Rethinking Disability and Mathematics Rachel Lambert,2024-04-15 Every child has a

right to make sense of math and to use math to make sense of their worlds Despite their gifts students with disabilities are often viewed from a deficit standpoint in mathematics classrooms These students are often conceptualized as needing to be fixed or remediated Rethinking Disability and Mathematics argues that mathematics should be a transformative space for these students a place where they can discover their power and potential and be appreciated for their many strengths Author Rachel Lambert introduces Universal Design for Learning for Math UDL Math a way to design math classrooms that empowers disabled and neurodiverse students to engage in mathematics in ways that lead to meaningful and joyful math learning The book showcases how UDL Math can open up mathematics classrooms so that they provide access to meaningful understanding and an identity as a math learner to a wider range of students Weaved throughout the book are the voices of neurodiverse learners telling their own stories of math learning Through stories of real teachers recognizing the barriers in their own math classrooms and redesigning to increase access the book Reframes students with disabilities from a deficit to an asset perspective paving the way for trusting their mathematical thinking Offers equitable math instruction for all learners including those with disabilities neurodiverse students and or multilingual learners Applies UDL to the math classroom providing practical tips and techniques to support students cognitive affective and strategic development Immerses readers in math classrooms where all students are engaged in meaningful mathematics from special education day classes to inclusive general education classrooms from grades K 8 Integrates research on mathematical learning including critical math content such as developing number sense and place value fluency with math facts and operations and understanding fractions and algebraic thinking Explores critical issues such as writing IEP goals in math This book is designed for all math educators both those trained as general education teachers and those trained as special education teachers The UDL Math approach is adapted to work for all learners because everyone varies in how they perceive the world and in how they approach mathematical problem solving When we rethink mathematics to include multiple ways of being a math learner we make math accessible and engaging for a wider group of learners
