Mad Studies: The Basics Merrick Daniel Pilling, 2025-05-19 Mad Studies The Basics provides an introductory account of a field that emerged from and must remain grounded within community knowledge activism and the perspectives of those who have experienced madness and mental health systems It is a concise text that introduces the field through an exploration of some origins of Mad Studies as well as two interrelated queries what does Mad Studies help us understand and what does Mad Studies help us do This exploration reveals that Mad Studies is an interdisciplinary intersectional and multi vocal field that demands different answers to the very meaning of the beliefs behaviours and bodymind experiences that are currently

characterized as being indicative of mental illness At the heart of Mad Studies is a liberationist desire to resist transform and abolish the systems that create marginalization and implement responses to madness that are grounded in the collective knowledge of those deemed Mad This book shows that the contributions of Indigenous Black racialized queer and trans people must be understood as central to and already embedded within Mad Studies and activism rather than as add ons expansions or efforts to make Mad Studies more inclusive It will be of interest to all scholars and students of disability studies social work gender studies education health sciences sociology and psychology as well as practitioners in mental health care and those with lived experience of madness and mental health systems

Guyana: from Slavery to the Present Ramesh Gampat, 2015-04-15 It is common knowledge that slavery and indenture were characterized by long hours of physical labor, restriction of movement, and other basic human freedoms, and severe punishment for violations of draconian labor laws. Less well known is the fact that nutrition was very deficient and a range of infectious diseases maimed, debilitated, and killed on a large scale. In trying to narrow the knowledge gap with respect to Guyana, Ramesh Gampat shows that extremely poor sanitary conditions, awful hygiene, and malnutrition hastened widespread infections and created a vicious cycle. The British protected its own soldiers, officials, and colonists by establishing a medical enclave that lasted until Emancipation in 1838. Former slaves were then quarantined to neglected and decaying villages, and Indians to plantations. Concern with health conditions appeared only during periods of epidemics, and even then it was essentially for the protection of Europeans. Colonial medicine opened the way for stereotyping, labeling, racialization of disease, neutralization of potential leaders in the struggle for justice, and crystallization of the view that Europeans were superior to Blacks and Indians. Shorter stature and shorter life expectancy are good indications that slaves and indentured immigrants fared considerably less well than Europeans. Several infectious diseases sickened and fell Blacks and Indians, including malaria and undefined fevers, pneumonia, and bronchitis, diarrhea, and enteritis, tuberculosis, pneumonia, and hookworm. The conquest of malaria in the early 1950s accelerated the epidemiological transition from communicable to chronic noncommunicable diseases, and today NCDs account for some three quarters of all deaths in Guyana. Malaria has reemerged, fueled by a gold boom that consumes huge amounts of mercury. The potentially adverse public health consequences of this relatively new dynamic, the combined trio, have been neglected.
