Life and Mind José Manuel Viejo, Mariano Sanjuán, 2023-06-12 This volume provides a broad overview of some cutting edge philosophical topics of growing interest at the juncture between cognitive science and biology The main goal is not to integrate the variety of approaches into a single account but rather to offer diverse perspectives on a collection of selected biological issues of particular philosophical relevance reflecting the plurality of current research in these areas Four conceptual vectors give this volume its coherence Animal and human cognition With respect to animal cognition this volume focuses on self awareness and methodological flaws in the science of animal consciousness Regarding human cognition the authors of this volume address various aspects of so called 4E cognition Genetics The role of genes in the development of mind and life has always been philosophically controversial In this volume the authors address the possibility of considering post genomic genes as natural kinds and the proper analysis of the concept of genotype Teleology This volume addresses issues of evolutionary causality and teleosemantics as well as questions relating to biological teleology and regulation Evolution Evolution exemplifies better than any other concept the convergence point between philosophy biology and cognitive sciences Among other things the volume deals with the origin of novelties in evolutionary processes from various viewpoints e g cultural evolution and developmental plasticity Despite their disparity all these topics belong to a common naturalistic framework By presenting them in a single volume the editors want to emphasize the need to always conduct philosophical research on mind and life with tangential domains in mind This book is a valuable resource for students and researchers of philosophy with a special interest in life cognition and evolution as well as for biologists and cognitive scientists

Philosophy of Systems Biology Sara Green, 2016-12-15 The emergence of systems biology raises many fascinating questions What does it mean to take a systems approach to problems in biology To what extent is the use of mathematical and computational modelling changing the life sciences How does the availability of big data influence research practices What are the major challenges for biomedical research in the years to come This book addresses such questions of relevance not only to philosophers and biologists but also to readers interested in the broader implications of systems biology for science and society The book features reflections and original work by experts from across the disciplines including systems biologists philosophers and interdisciplinary scholars investigating the social and educational aspects of systems biology In response to the same set of questions the experts develop and defend their personal perspectives on the distinctive character of systems biology and the challenges

that lie ahead Readers are invited to engage with different views on the questions addressed and may explore numerous themes relating to the philosophy of systems biology This edited work will appeal to scholars and all levels from undergraduates to researchers and to those interested in a variety of scholarly approaches such as systems biology mathematical and computational modelling cell and molecular biology genomics systems theory and of course philosophy of biology

Complexity and the Function of Mind in Nature Peter Godfrey-Smith, 1998-09-28 This book explains the relationship between intelligence and environmental complexity and in so doing links philosophy of mind to more general issues about the relations between organisms and environments and to the general pattern of externalist explanations The author provides a biological approach to the investigation of mind and cognition in nature In particular he explores the idea that the function of cognition is to enable agents to deal with environmental complexity The history of the idea in the work of Dewey and Spencer is considered as is the impact of recent evolutionary theory on our understanding of the place of mind in nature

Conceptual Change in Biology Alan C. Love, 2014-11-07 This volume explores questions about conceptual change from both scientific and philosophical viewpoints by analyzing the recent history of evolutionary developmental biology It features revised papers that originated from the workshop Conceptual Change in Biological Science Evolutionary Developmental Biology 1981 2011 held at the Max Planck Institute for the History of Science in Berlin in July 2010 The Preface has been written by Ron Amundson In these papers philosophers and biologists compare and contrast key concepts in evolutionary developmental biology and their development since the original seminal Dahlem conference on evolution and development held in Berlin in 1981 Many of the original scientific participants from the 1981 conference are also contributors to this new volume and in conjunction with other expert biologists and philosophers specializing on these topics provide an authoritative comprehensive view on the subject Taken together the papers supply novel perspectives on how and why the conceptual landscape has shifted and stabilized in particular ways yielding insights into the dynamic epistemic changes that have occurred over the past three decades This volume will appeal to philosophers of biology studying conceptual change evolutionary developmental biologists focused on comprehending the genesis of their field and evaluating its future directions and historians of biology examining this period when the intersection of evolution and development rose again to prominence in biological science
