The Cognitive Artifacts of Designing Willemien Visser, 2006-08-08 In this dynamic review and synthesis of empirical research and theoretical discussion of design as cognitive activity Willemien Visser reconciles and integrates the classical view of design as conceptualized by Herbert Simon s symbolic information processing approach with modern views of design such as the situativity approach as formulated by Donald Schon The author goes on to develop her own view on design in which design is most appropriately characterized as a construction of representations She lays the groundwork for the integration of design research and cognitive science This seemingly simple framework has implications that set the stage for this mutually beneficial integration

Analysing Design Thinking: Studies of Cross-Cultural Co-Creation Bo Christensen, Linden J. Ball, Kim Halskov, 2017-08-03 The scientific analysis of design thinking continues to burgeon and is of considerable interest to academic scholars and design practitioners across many disciplines This research tradition has generated a growing corpus of studies concerning how designers think during the creation of innovative products although less focus has been given to analysing how designers think when creating less tangible deliverables such as concepts and user insights Analysing Design Thinking Studies of Cross Cultural Co Creation brings together 28 contributions from internationally leading academics with a shared interest in design thinking who take a close look at professional designers working on a project that not only involves soft deliverables but where a central role is played by co creation across multiple culturally diverse stakeholders This collection of detailed multi method analyses gives a unique insight into how a Scandinavian design team tackled a

specific design task within the automotive industry over a four month design process All papers draw upon a common video based dataset and report analyses that link together a diversity of academic disciplines including psychology anthropology linguistics philosophy architecture management engineering and design studies The dataset affords multiple entry points into the analysis of design thinking with the selected papers demonstrating the application of a wide range of analytic techniques that generate distinct yet complementary insights Collectively these papers provide a coherent framework for analysing and interpreting design thinking in vivo through video based field studies

Theoretical and Empirical Studies of Software Development's Role as a Design Discipline Alexander Thomas Baker, 2010 It is widely accepted that creating an effective piece of software requires some degree of design But beyond this there are major gaps in the software engineering research community's concept of software design There is little consensus among researchers about the role of design in the software process and little research has been done into how software engineers in practice actually design The work presented in this dissertation aims to help remedy this state of affairs employing two main approaches The first is theoretical this dissertation begins with a framework for explaining design as it exists across various design disciplines This framework is then applied to software design The model presented here is unusual in that the entirety of the software development process from the conception of the program to its retirement is cast as a single unified design process Using this design oriented perspective on software development several existing software process models are reconsidered and compared and observations about the nature of the software product are made The second approach is empirical this dissertation presents three studies of software designers in action Two of these studies focus on professional software designers who were asked to create a high level design for a traffic simulation program The third study examines a group of novice software designers who worked on the same problem and compares their processes to those exhibited by the professional designers Observations about the designers work are presented and several techniques for analyzing and visualizing software design processes are also demonstrated This dissertation aims to spur the study of software engineering as a design discipline Its primary contributions include a novel framework for considering design in general a new design oriented perspective on the software development process a rich set of observations about the processes employed by expert and novice software designers and numerous examples of analytical methods and visualization techniques that can be used to study software design
