

STUDIES IN FOSSIL BOTANY

LECTURE I

INTRODUCTION—THE FOSSIL EQUISETALES

It is a general rule, applying to knowledge of every kind, that we cannot hope to understand any group of phenomena without a study of its antecedents. In political inquiries, no student would attempt to make himself acquainted with the existing constitution of a country, without seeking to gain a knowledge of the historical events by which it has been built up. In like manner, we cannot obtain any adequate idea of the present state of an art, such as sculpture or painting, unless we are prepared to study the history and development of the art in past times. Again, to come nearer to our own subject, scientific geography is impossible without geology, that is to say, without a knowledge of the past changes, to which the surface of the earth owes its present configuration. *Vere scire est per causas scire*, and causation is only known to us by the succession of events.

The same principle holds good for the special case of biology, the science of which botany is a part.
