Non-canonical Control in a Cross-linguistic Perspective Anne Mucha, Jutta M. Hartmann, Beata Trawiński, 2021-09-17 Control typically defined as a specific referential dependency between the null subject of a non finite embedded clause and a co dependent of the matrix predicate has been subject to extensive research in the last 50 years While there is a broad consensus that a distinction between Obligatory Control OC Non Obligatory Control NOC and No Control NC is useful and necessary to cover the range of relevant empirical phenomena there is still less agreement regarding their proper analyses In light of this ongoing discussion the articles collected in this volume provide a cross linguistic perspective on central questions in the study of control with a focus on non canonical control phenomena This includes cases which show NOC or NC in complement clauses or OC in adjunct clauses cases in which the controlled subject is not in an infinitival clause or in which there is no unique controller in OC i e partial control split control or other types of controllers Based on empirical generalizations from a wide range of languages this volume provides insights into cross linguistic variation in the interplay of different components of control such as the properties of the constituent hosting the controlled subject the syntactic and lexical properties of the matrix predicate as well as restrictions on the controller thereby furthering our empirical and theoretical understanding of control in grammar

Dimensions of Movement Artemis Alexiadou, 2002-01-01 This volume presents a collection of papers of recent generative research into the properties of phrasal and feature movement which explore these key syntactic phenomena from different angles and across languages The papers advance or build on models of movement which capitalize either on generalized feature movement or on generalized remnant movement Both these approaches attempt to develop a restrictive theory of movement aiming at a simplification of the operations of the computational system Despite the fact that they are so different technically generalized feature movement and generalized remnant movement both push the theory of movement to the same direction in two important respects a Elimination of head movement b Elimination of covert movement The book is of primary interest to researchers and students in theoretical linguistics and syntactic theory
