Division of Research Grants, 1975 **Research Awards Index** , **Probabilistic Models for Some Intelligence and Attainment Tests** Georg Rasch, 1960 *Recent Progress in Mathematical Psychology* Cornelia E. Dowling, Fred S. Roberts, Peter Theuns, 1998 Mathematical psychology is an interdisciplinary area of research in which methods of mathematics operations research and computer science in psychology are used Now more than thirty years old the field has continued to grow rapidly and has taken on a life of its own This volume summarizes recent progress in mathematical psychology as seen by some of the leading figures in the field as well as some of its leading young researchers The papers presented in this volume reflect the most important current directions of research in mathematical psychology They cover topics in measurement decision and choice psychophysics and psychometrics knowledge representation neural nets and learning models and cognitive modeling Some of the major ideas included are new applications of concepts of measurement theory to social phenomena new directions in the theory of probabilistic choice surprising results in nonlinear utility theory applications of boolean methods in the theory of knowledge spaces applications of neural net ideas to concept learning developments in the theory of parallel processing models of response time new results in inhibition theory and new concepts about paired associate learning Information and Inference Jaakko Hintikka, Patrick Suppes, 2012-12-06 In the last 25 years the concept of information has played a crucial role in communication theory so much so that the terms information theory and communication theory are sometimes used almost interchangeably It seems to us however that the notion of information is also destined to render valuable services to the student of induction and probability of learning and reinforcement of semantic meaning and deductive inference as well as of scientific method in general The present volume is an attempt to illustrate some of these uses of information concepts

In On Semantic Information Hintikka summarizes some of his and his associates recent work on information and induction and comments briefly on its philosophical suggestions Jamison surveys from the subjectivistic point of view some recent results in Bayesian Information Usage Rosenkrantz analyzes the information obtained by experimentation from the Bayesian and Neyman Pearson standpoints and also from the standpoint of entropy and related concepts The much debated principle of total evidence prompts Hilpinen to examine the problem of measuring the information yield of observations in his paper On the Information Provided by Observations Pietarinen addresses himself to the more general task of evaluating the systematizing explanatory power of hypotheses and theories a task which quickly leads him to information concepts Domotor develops a qualitative theory of information and entropy His paper gives what is probably the first axiomatization of a general qualitative theory of information adequate to guarantee a numerical representation of the standard sort
