Studies In The History Of General Relativity Based On The:

Studies in the History of General Relativity Jean Eisenstaedt, A.J. Kox, 1992-02-07 Among the considerations of the two dozen papers are the reception and development of Einstein's theory of general relativity in various institutions around the world conceptual issues of the theory especially themes concepts and principles associated with his theory of gravity a number of tech

The Genesis of General Relativity Jürgen Renn, 2007-06-17 The transition from classical to modern physics in the first half of the twentieth century by quantum and relativity theories affected some of the most fundamental notions of physical thinking such as matter radiation space and time This transition thus represents a challenge for any attempt to understand the structures of a scientific revolution The present four volume work aims at a comprehensive account of the way in which the work of Albert Einstein and his contemporaries changed our understanding of space time and gravitation The conceptual framework of classical nineteenth century physics had to be fundamentally restructured and reinterpreted in order to arrive at a theory of gravitation compatible with the new notions of space and time established in 1905 by Einstein's special theory of relativity Whereas the classical theory of gravitation postulated an instantaneous action at a distance Einstein's new relativistic kinematics rather suggested an analogy between the gravitational field and the electromagnetic field propagating with a finite speed It is therefore not surprising that Einstein was not alone in addressing the problem of formulating a theory of gravitation that complies with the kinematics of relativity theory The analysis of these alternative approaches as well as of earlier alternative approaches to gravitation within classical physics turns out to be crucial for identifying the necessities and contingencies in the actual historical development

Literature 1992, Part 1

Studies in the History of General Relativity Jean Eisenstaedt, 1992

Einstein and the History of General Relativity Don Howard, John Stachel, 1989 Based upon the proceedings of the First International Conference on the History of General Relativity held at Boston University's Osgood Hill Conference Center North Andover Massachusetts 8-11 May 1986 this volume brings together essays by twelve prominent historians and philosophers of science and physicists The topics range from the development of general relativity John Norton John Stachel and its early reception Carlo Cattani Michelangelo De Maria Anne Kox through attempts

to understand the physical implications of the theory Jean Eisenstaedt Peter Havas and to quantize it Peter G Bergmann to elaborations of the theory into a unified theory of electromagnetism and gravitation Vladimir P Vizgin Michel Biezunski and considerations of its cosmological extensions Pierre Kerszberg George F R Ellis This is the first volume to survey many of the most important questions in the history of general relativity with many of the contributions drawing upon such original resources as the Einstein Archive It is hoped that it will stimulate much needed further research in this hitherto neglected area

Working Toward Solutions in Fluid Dynamics and Astrophysics Lydia Patton,Erik Curiel,2023-03-28 This book focuses on continuing the long standing productive dialogue between physical science and the philosophy of science Researchers and readers who want to keep up to date on front line scientific research in fluid mechanics and gravitational wave astrophysics will find timely and well informed analyses of this scientific research and its philosophical significance These exciting frontiers of research pose deep scientific problems and raise key questions in the philosophy of science related to scientific explanation and understanding theory change and assessment measurement interpretation realism and modeling The audience of the book includes philosophers of science philosophers of mathematics scientists with philosophical interests and students in philosophy history mathematics and science Anyone who is interested in the methods and philosophical questions behind the recent exciting work in physics discussed here will profit from reading this book

Space, Number, and Geometry from Helmholtz to Cassirer Francesca Biagioli,2016-08-22 This book offers a reconstruction of the debate on non Euclidean geometry in neo Kantianism between the second half of the nineteenth century and the first decades of the twentieth century Kant famously characterized space and time as a priori forms of intuitions which lie at the foundation of mathematical knowledge The success of his philosophical account of space was due not least to the fact that Euclidean geometry was widely considered to be a model of certainty at his time However such later scientific developments as non Euclidean geometries and Einstein s general theory of relativity called into question the certainty of Euclidean geometry and posed the problem of reconsidering space as an open question for empirical research The transformation of the concept of space from a source of knowledge to an object of research can be traced back to a tradition which includes such mathematicians as Carl Friedrich Gauss Bernhard Riemann Richard Dedekind Felix Klein and Henri Poincaré and which finds one of its clearest expressions in Hermann von Helmholtz s epistemological works Although Helmholtz formulated compelling objections to Kant the author reconsiders different strategies for a philosophical account of the same transformation from a neo Kantian perspective and especially Hermann Cohen s account of the apriority of mathematics in terms of applicability and Ernst Cassirer s reformulation of the a priori of space in terms of a system of hypotheses This book is ideal for students scholars and researchers who wish to broaden their knowledge of non Euclidean geometry or neo Kantianism

Companion to the History of Modern Science G N Cantor,G.N. Cantor,J.R.R. Christie,M.J.S. Hodge,R.C. Olby,2020-10-07 The 67 chapters of this book describe and analyse the development of Western

science from 1500 to the present day Divided into two major sections The Study of the History of Science and Selected Writings in the History of Science the volume describes the methods and problems of research in the field and then applies these techniques to a wide range of fields Areas covered include the Copernican Revolution Genetics Science and Imperialism the History of Anthropology Science and Religion Magic and Science The companion is an indispensable resource for students and professionals in History Philosophy Sociology and the Sciences as well as the History of Science It will also appeal to the general reader interested in an introduction to the subject **Revisiting the Foundations of Relativistic Physics** Ashtekar, 2011-06-28 This book is for physicists historians and philosophers of physics as well as students seeking an introduction to ongoing debates in relativistic and quantum physics This title is unique in that it comprises contributions by leading physicists philosophers and historians of science it covers the recent debates on the emergence of relativity and quantum theory it includes chapters with an introductory character comprehensible to students and science teachers it can be used in graduate level courses in the history and philosophy of science it strengthens the bonds between the communities of scientists historians and philosophers
