Shryock,Jacob S. Siegel,Elizabeth A. Larmon,1973 **Origins of Life** Freeman Dyson,1999-09-28 How did life on earth originate Did replication or metabolism come first in the history of life In this book Freeman Dyson examines these questions and discusses the two main theories that try to explain how naturally occurring chemicals could organize themselves into living creatures The majority view is that life began with replicating molecules the precursors of modern genes The minority belief is that random populations of molecules evolved metabolic activities before exact replication existed Dyson analyzes both of these theories with reference to recent important discoveries by geologists and chemists His main aim is to stimulate experiments that could help to decide which theory is correct This second edition covers the enormous advances that have been made in biology and geology in the past and the impact they have had on our ideas about how life began It is a clearly written fascinating book that will appeal to anyone interested in the origins of life *Data Mining and Knowledge Discovery in Real Life Applications* Julio Ponce,Adem Karahoca,2009-01-01 This book presents four different ways of theoretical and practical advances and applications of data mining in different promising areas like Industrialist Biological and Social Twenty six chapters cover different special topics with proposed novel ideas Each chapter gives an overview of the subjects and some of the chapters have cases with offered data mining solutions We hope that this book will be a useful aid in showing a right way for the students researchers and practitioners in their studies **United States life tables, 1890, 1901, 1910, and 1901-1910** United States.
