Origin, Evolution and Biogeographic History of South American Turtles Marcelo S. de la Fuente, Juliana Sterli, Ignacio Maniel, 2013-10-17 The extended continental South American turtle record Norian to Lujanian allows us to follow the evolution of this reptile clade from its origins. Several significant stem turtle taxa such as *Palaeochersis talampayensis* and *Condorchelys antiqua* provide information on the first steps of turtle evolution. Others such as *Chubutemys copelloi* or *Patagoniaemys gasparinae* provide clues to the origin of the bizarre horned tortoises of the clade *Meiolaniidae*. The panpleurodiran species such as *Notoemys laticentralis* or *Notoemys zapatocaensis* shed light on the origin of modern pleurodiran turtles. This book explores aquatic and terrestrial cryptodiran turtles South Gondwana pleurodiran turtles North Gondwana pleurodiran turtles *Meiolaniforms* and early differentiation of Mesozoic turtles.

In the Footsteps of Darwin: Geoheritage, Geotourism and Conservation in the Galapagos Islands Daniel Kelley, Kevin Page, Diego Quiroga, Raul Salazar, 2019-01-18 This book provides the first ever overview of and guide to the geological setting and related features of the famous volcanically active Galapagos Islands as well as an in depth analysis of the setting's relationship to the region's unique and iconic ecology and its conservation. Further it provides an introduction to human settlement and activity on the islands including the transition from subsistence to a fishing economy and more recently tourism all in the context of increasingly restrictive conservation regulations. Importantly the book also explores the development of the concept and practice of sustainable development across the islands as a framework for future economic development pursuing an approach that reconciles the needs of the resident population with conservation of this fragile environment. The book is intended for a broad readership from those engaged in geological and ecological studies college and university educators and conservation practitioners to more general visitors to the islands.

Threatened and Recently Extinct Vertebrates of the World Matthew Richardson, 2023-03-09 Habitat loss and degradation are currently the main anthropogenic causes of species extinctions. The root cause is human overpopulation. This unique volume provides for the very first time a comprehensive overview of all threatened and recently extinct mammals birds reptiles amphibians and fishes within the context of their locations and habitats. The approach takes a systematic examination of each biogeographic realm and region of the world both terrestrial and marine but with a particular emphasis on geographic features such as mountains islands and coral reefs. It reveals patterns useful in biodiversity conservation helps to put it all into perspective and ultimately serves as both a baseline from which to compare subsequent developments as well as a standardization of the way threatened species are studied.

Collecting Evolution Matthew J. James, 2017-03-01 In 1905 eight men from the California Academy of Sciences set sail from San Francisco for a scientific collection expedition in the Galapagos Islands and by the time they were finished in 1906 they had completed one of the most important expeditions in the history of both evolutionary and conservation science These scientists collected over 78 000 specimens during their time on the islands validating the work of Charles Darwin and laying the groundwork for foundational

evolution texts like Darwin's Finches. Despite its significance, almost nothing has been written on this voyage lost amongst discussion of Darwin's trip on the Beagle and the writing of David Lack. In *Collecting Evolution*, author Matthew James finally tells the story of the 1905 Galapagos expedition. James follows these eight young men aboard the Academy to the Galapagos and back and reveals the reasons behind the groundbreaking success they had. A current Fellow of the California Academy of Sciences, James uses his access to unpublished writings and photographs to provide unprecedented insight into the expedition. We learn the voyagers' personal stories and how for all the scientific progress that was made, just as much intense personal drama unfolded on the trip. This book shares a watershed moment in scientific history crossed with a maritime adventure. There are four tangential suicides and controversies over credit and fame. *Collecting Evolution* also explores the personal lives and scientific context that preceded this voyage, including what brought Darwin to the Galapagos on the Beagle voyage seventy years earlier. James discusses how these men thought of themselves as collectors before they thought of themselves as scientists and the implications this had on their approach and their results. In the end, the voyage of the Academy proved to be crucial in the development of evolutionary science as we know it. It is the longest expedition in Galapagos history and played a critical role in cementing Darwin's legacy. *Collecting Evolution* brings this extraordinary story of eight scientists and their journey to life.

Galápagos Paul D. Stewart, 2007-02-28 Details the natural and human history of the islands and describes Darwin's theory of evolution.

Lonesome George Henry Nicholls, 2006-04-04 Lonesome George is a 5ft long 200lb tortoise aged between 60 and 200. In 1971 he was discovered on the remote Galapagos island of Pinta from which tortoises had supposedly been exterminated by greedy whalers and seal hunters. He has been at the Charles Darwin Research Station on Santa Cruz island ever since on the off chance that scientific ingenuity will conjure up a way of reproducing him and resurrecting his species. Meanwhile a million tourists and dozens of baffled scientists have looked on as the celebrity reptile shows not a jot of interest in the female company provided. Today Lonesome George has come to embody the mystery, complexity and fragility of the unique Galapagos archipelago. His story echoes the challenges of conservation worldwide; it is a story of Darwin, sexual dysfunction, adventure on the high seas, cloning, DNA fingerprinting and eco tourism.

Chelonian Conservation and Biology, 2006 [A Sheltered Life](#) Paul Chambers, 2006 *A Sheltered Life* offers a fascinating look at one of the world's strangest and most wondrous animals whose significance in modern science and culture cannot be underestimated. In an engaging blend of cultural and natural history, the book ranges from the earliest mention of the tortoises many millennia ago to the wholesale plunder of their populations starting in the sixteenth century to modern attempts to protect the tortoise and track down members of what were once believed to be extinct populations.

The Role of Science for Conservation Matthias Wolff, Mark Gardener, 2012 The book integrates the knowledge and reflections of thirty scientists of which many have dedicated a substantial part of their professional life to the Galapagos archipelago to the conservation of its biodiversity and to the sustainable management of its resources. The book can be considered a milestone.
