The Flowering Of Gondwana:

The Flowering of Gondwana Mary E. White, 1986 Illustrated with nearly four hundred magnificent photographs of fossils and living plants this book tells the story of Australia's remarkable floral heritage from its genesis through to its last stages of evolution while also providing a general introduction to major patterns in the history of plant life Over 50 million years ago when Australia broke away from the great supercontinent known as Gondwana which comprised all the major southern landmasses a modern aspect flora was already established and rainforests covered most of the land The remnant rainforests of Australia are ancestors of a unique flora that evolved in isolation as the continent moved slowly northward to the position it occupies today Here Mary White traces the evolution of plants from the earliest times when all life was confined to the water and the land was barren and describes the emergence of the first land plants about 400 million years ago Her portrayal of Australia's flora includes the changes that have since come with the arrival of settlers and their crops of exotic plants The fossil record studied in this book is a tantalizing key to visualizing the world as it once was The plants tell us of past climates conjure up a picture of ancient landscapes and explain configurations of land and sea on the ever changing surface of the earth A single source of information on fossil floras and environments of past ages The Flowering of Gondwana enables scientists and general readers to follow Australia's plant ancestry and to appreciate the individuality that has evolved from an inheritance in common with plants from other southern lands

The Flowering of Australia's Rainforests Geoff Williams, 2021-05-03 The Flowering of Australia's Rainforests provides a comprehensive introduction to the pollination ecology evolution and conservation of Australian rainforest plants with particular emphasis on subtropical rainforests and their associated pollinators This significantly expanded second edition includes new information on the impact of climate change fire fragmentation and invasive species Rainforests continue to be a focus of global conservation concern not only from threats to biodiversity in general but to pollinators specifically Within Australia this has been emphasised by recent cataclysmic fire impacts ongoing extreme drought events and the wider consideration of climate change This second edition strengthens coverage of these issues beyond that of the first edition The Flowering of Australia's Rainforests makes timely contributions to our understanding of the nature and function of the world's pollinator fauna plant reproduction dependencies and the evolutionary pathway that has brought them to their current state and function Illustrated with 150 colour plates of major species and rainforest formations this reference work will be of value to ecologists and field naturalists botanists conservation biologists ecosystem managers and community groups involved in habitat restoration

Burning Bush Stephen J. Pyne, 2014-10-07 From the time of the continent's formation tens of millions of years ago as the Gondwana twin of Antarctica Australia has been dominated by fire much as its sister has been by ice Now Stephen Pyne one of our foremost environmental historians proposes a major reinterpretation of the Australian experience by using fire and Australia to explain one another He narrates the story of how fire came to Australia and interacted with the Australian biota and its

human inhabitants while at the same time he relates the planetary saga of fire as it has been played out on this special island continent. Much as the Aborigines exploited fire to remake their environment into something more usable, so Stephen Pyne exploits fire to transform the landscape of history into something more accessible to use its transmuting power to extract new meaning out of familiar events. Pyne traces the impact of fire from its initial influence on the evolving vegetation of the new continent through its use by the Aborigines and the subsequent European settlers to the holocaust of February 1983 known as Ash Wednesday and he shows us that the dynamic nature of fire has made it a most powerful environmental determinant in Australia shaping both its social and natural histories. In his critically acclaimed study of Antarctica *The Ice*, Pyne explored the myriad dimensions of the cold continent; now *Burning Bush* offers us an equally absorbing examination of a continent informed by fire.

Earth's Landscape Joyce A. Quinn, Susan L. Woodward, 2015-02-03 This unusual encyclopedia brings together in depth information on more than 450 natural geographic features from around the world and offers an array of creative tools to promote critical thinking and classroom discussion. With Earth undergoing rapid environmental change, students and the general public alike should be knowledgeable about the world's geographic features. This authoritative two-volume reference enables readers to do just that. It describes continents and oceans, individual mountains, islands, caves, and rivers, and ecological entities such as wildlife refuges and national parks. Each entry provides a geographic overview of the feature's significance, location, description, geologic history, biota, protected areas, and environmental issues. But the coverage goes even deeper so that entries also discuss the cultural importance of each natural place, covering everything from indigenous beliefs to traditional folklore to contemporary legends. The encyclopedia stands apart from other works not only in the depth of its coverage but also in its range. It discusses lesser-known as well as prominent geographical features and offers critical thinking aids that will help students see how the natural world relates to their daily lives. Teaching and learning tools include an appendix called *Opposing Viewpoints* that allows students to understand landforms involved in current conflicts and disputes, as well as an *Activities Discussion Questions* appendix.

The Nonmarine Triassic Spencer G. Lucas, Michael Morales, [Australia, New Zealand, and the Pacific](#) Donald S. Garden, 2005-08-19 A fascinating study of the environmental history of Australia, New Zealand, and the islands of the Pacific from the time of the dinosaurs to the present day. Of interest to students and academics alike, this book provides a much-needed synthesis of the recent literature on the environmental history of Australia and Oceania. Part of ABC-CLIO's *Nature and Human Societies* series, this book maps out the key trends in the region's environmental history, charting the creation of the Australian continent from the ancient land mass of Gondwanaland to the arrival of humans. Especially fascinating are the chapters highlighting how successive waves of human migration created environmental havoc throughout the region, leading to the collapse of the Easter Island civilization and the spread of nonindigenous flora and fauna. From the controversies over the reasons why creatures such as the marsupial lion and the giant kangaroo became extinct to such contemporary problems as deforestation and global

Kohen, 1995 When Captain Arthur Phillip arrived in

Port Jackson Sydney he saw a magnificent harbour lined with trees Many areas were park like in appearance with well spaced trees interspersed with patches of grass The local Aborigines were soon driven away and with them went the practice of regularly burning off the undergrowth The grass disappeared and the undergrowth took over and so emerged the untidy bush of the foreshore that we see today For 50 000 years before white settlement the Aboriginal people were an integral part of the environment They harvested the land and they changed the environment to suit themselves Fire was their tool for doing this The degree to which hunting and burning has changed the patterns of vegetation and populations of fauna is hotly debated Were the Aborigines responsible for the disappearance of the megafauna In this book Kohen says they were a contributing factor but probably only after major population declines due to climate change He presents the arguments and evidence to show that Aboriginal influence on many ecosystems of this continent has been profound and that any understanding of the Australian environment must take this into account **Phytochemistry of Australia's Tropical**

Vestal Fire Stephen J. Pyne, 2012-04-01 Stephen Pyne has been described as having a consciousness composed of equal parts historian ecologist philosopher critic poet and sociologist At this time in history when many people are trying to understand their true relationship with the natural environment this book offers a remarkable contribution breathtaking in the scope of its research and exhilarating to read Pyne takes the reader on a journey through time exploring the terrain of Europe and the uses and abuses of its lands as well as through migration and conquest many parts of the rest of the world Whether he is discussing the Mediterranean region Russia Scandinavia the British Isles central Europe or colonized islands whether he is considering the impact of agriculture forestry or Enlightenment thinking the author brings an unmatched insight to his subject Vestal Fire takes its title from Vesta Roman goddess of the hearth and keeper of the sacred fire on Mount Olympus But the book's title also suggests the strengths and limitations of Europe's peculiar conception of fire and through fire of its relationship to nature Between the untamed fire of the wilderness and the tended fire of the hearth lies a never ending dialectic in which human beings struggle to control natural forces and processes that in fact can sometimes be directed but never wholly dominated or contained

The Rose's Kiss Peter Bernhardt, 1999-05 Flowers bring joy and beauty to our lives from the smallest patch of daisies outside our window to the elaborate floral decorations on display at weddings banquets and funerals As well as offering aesthetic benefits they teach us much about how the world works each blossom is a living factory that manufactures organs and compounds ranging from the flavonoids that make a rose red to the pollen that gives us hayfever In The Rose's Kiss botanist Peter Bernhardt rekindles our sense of wonder at the plant life all around us He presents a fascinating and wide ranging look at the natural history of flowers their forms and functions as well as their hidden interactions with the surrounding environment and the other living organisms they depend upon for survival Using both familiar and exotic examples he examines flower architecture including the wonderfully descriptive names of floral parts and their respective roles in a plant's life cycle the secret exchange between a bud and its environment that determines blooming time and the lifespan of individual blossoms colors scents and other mechanisms that plants use to attract

pollinators and keep them returning season after season the incredible diversity of organisms that pollinate plants cockroaches flies moths parrots hummingbirds bats and others extinct plants and their fossil blossoms showing the evolution of flowering plants over the past 125 million years and much more Delightfully interwoven with intriguing facts and stories from history folklore and mythology *The Rose s Kiss* is a wonderful example of literary science writing at its best It should hold wide appeal for nature lovers garden enthusiasts and anyone interested in learning more about the inner workings of the natural world
