The Function And Nature Of Imagery:

The Function and Nature of Imagery Peter W. Sheehan, John S. Antrobus, 1972 **The World of the Imagination** Eva T. H. Brann, 1993-03-16 In this book Eva Brann sets out no less a task than to assess the meaning of imagination in its multifarious expressions throughout western history The result is one of those rare achievements that will make *The World of the Imagination* a standard reference **The Function and Nature of Imagery, Edited by Peter W. Sheehan. Contributors: John S. Antrobus [and Others].** Peter W. Sheehan, John S. Antrobus, 1972 **Hypnosis** Erika Fromm, Ronald Edwin Shor, Establishes the theoretical and historical foundations of hypnosis discusses major areas of current research and predicts trends in the field *The Power of Human Imagination* Jerome L. Singer, Kenneth S. Pope, 2012-12-06 For at least half of the twentieth century psychology and the other mental health professions all but ignored the significant adaptive possibilities of the human gift of imagery Our capacity seemingly to duplicate sights sounds and other sensory experiences through some form of central brain process continues to remain a mysterious almost miraculous skill Because imagery is so much a private experience experimental psychologists found it hard to measure and turned their attention to observable behaviors that could easily be studied in animals as well as in humans Psychoanalysts and others working with the emotionally disturbed continued to take imagery information seriously in the form of dream reports transference fantasies and as indications of hallucinations or delusions On the whole however they emphasized the maladaptive aspects of the phenomena the distortions and defensiveness or the regressive qualities of daydreams and sequences of images The present volume grows out of a long series of investigations by the senior author that have suggested that daydreaming and the stream of consciousness are not simply manifestations in adult life of persisting phenomena of childhood Rather the data suggest that imagery sequences represent a major system of encoding and transforming information a basic human capacity that is inevitably part of the brain's storage process and one that has enormous potential for adaptive utility A companion volume *The Stream of Consciousness* edited by Kenneth S Pope and Jerome L **Concepts, Results, and Applications** E. Klinger, 2013-03-14 The stream of our consciousness contains an almost unceasing parade of sensation like experiences even in the absence of any external stimulation to produce them We experience picture like things sound like things and more our experiences can resemble any of our sense modalities These experiences are what we refer to by the phrase mental imagery The images need not be vivid People who doubt that they experience visual imagery are often persuaded by a simple exercise count the windows of the house in which you live Nearly everyone performs this task by walking around the house in imagination while counting windows or by walking through the house counting them from the inside The imaginary windows seem to be set in visual space There is a temptation to point at them with an index finger while one counts even though the images may never become vivid enough to seem like an actual visual experience But if they seem set in visual space if they can be pointed at they clearly constitute a sensory like

experience in some meaningful way **Assessment Strategies for Cognitive-Behavioral Interventions** Philip C. Kendall, Steven D. The Nature and Functions of Dreaming Ernest Hartmann, 2011 The Nature and Function of Dreaming presents a comprehensive theory of dreaming based on many years of psychological and biological research by Ernest Hartmann and others Critical to this theory is the concept of a Central Image in this volume Hartmann describes his repeated finding that dreams of being swept away by a tidal wave are common among people who have recently experienced a trauma of some kind a fire an attack or a rape Dreams with these Central Images are not dreams of the traumatic experience itself but rather the Central Image reveals the emotional response to the experience Dreams with a potent Central Image like the tidal wave vary in intensity along with the severity of the trauma this pattern was shown quite powerfully in a systematic study of dreams occurring before and after the September 11 attacks in New York Hartmann's theory comprises three fundamental elements dreaming is simply one form of mental functioning occurring along a continuum from focused waking thought to reverie daydreaming and fantasy Second dreaming is hyperconnective linking material more fluidly and making connections that aren't made as readily in waking thought Finally the connections that are made are not random but rather are guided by the dreamer's emotions or emotional concerns and the more powerful the emotion the more intense the Central Image
